## PREFACE

Odisha is the homeland of 62 different tribes who coexist with other communities. The socio-economic policies of the welfare government aims at accelerated development through holistic approach and different security related interventions. However, in the present times, the Left Wing activities in Odisha which engulfs about 122 blocks, in full or part, have slowed down the process of development in these areas as well as the state as a whole. During the last couple of years, the Left Wing Extremist (LWE) movement have intensified the owes and sufferings of the people living in these blocks. This has led both the Central and State Governments to take proactive initiatives towards implementation of various developmental schemes for the people of these areas which are the home land of many tribal communities with an aim to wean them away from the influence of the extremists. Government has been considering various interventions to focus on infrastructural development and thereby to ensure sustainable livelihood for the people of these LWE affected blocks. At present 122 blocks belonging to 21 districts of Odisha are coming under the grip of Left Wing Extremism where besides infrastructural development, there is a need for specific interventions in the fields of agriculture, education, health, social security, communication etc. to improve the living standard of the people.

In order to formulate plans for implementation of specific interventions, a broad data base at the block level has been a long standing need. To meet this need, concerted efforts have been made by the Data Resource Cell of this institute to prepare an updated database for these disturbed areas which has been compiled in a book form. These include administrative set up and vital statistics of the area as per Census 2011, major indicators of development such as, indicators on agriculture, irrigation potential, forest areas, education, health, infrastructural development, etc.,. Besides, the book also contains information on poverty alleviation programmes and social security programmes. These information have been collected from different available sources and meticulously examined to ensure correctness of data. Any error found may be unintentional and clerical.

Hope, the book will extend a valuable support to the planners, administrators, researchers and academicians. Any suggestions for improvement of this publication in future will be highly appreciated.

**Commissioner-Cum-Director**

# Introduction

Socio-economic Development through holistic approach has been a national priority since independence. Government of India through various interventions has been trying to improve the living conditions of the people with specific attention on their development and security related issues. The development policies pursued since independence has not been able to mitigate the discontentment of the target people as development programmes and schemes have always been imposed on these downtrodden communities from outside by a top down approach and therefore remained insensitive to their felt needs and concerns. It has affected their social organization and cultural identity and generated conflicts weakening their communal solidarity which made them vulnerable to various kinds of socio-economic exploitation.

But in these days, the presence of Naxalism and their movements have become major issues which have hindered the process of development in the Left Wing Extremist (LWE) affected blocks. Left Wing Extremism operates in the area where any typical administrative vacuum is perceived. The administrative vacuum occurs because these are remote areas where the Central Government or the State Government has not been able to put up very effective administrative machinery. The Left Wing Extremists have exploited the situation to change the mindset of the people living in these areas and alienate them from the national mainstream.

Under this backdrop, Governments both at the Central and State levels have made a detailed analysis on the spread and trends of Left Wing Extremist violence and identified 122 blocks coming under 21 districts of our state as the most LWE affected areas. The growing left wing activities in these parts of the state have either stalled or delayed a number of development interventions in the past couple of years. A sizable number of people in these areas either left their villages or victimized by these lawless activities and mindless violence.

In order to deal with the menace of Left Wing Extremism in a holistic manner, Government have taken various measures to accelerate the pace of development by ensuring rights and entitlements of local communities, improvements in governance and ensuring security and changing the public perception on development. In dealing with this decades-old problem, it has been felt appropriate, after various high level deliberations and interactions with the State Governments concerned, that an integrated approach aimed at the relatively more LWE affected areas would deliver results.

Under the approach, focused actions have been taken up to give special attention on planning, implementation and monitoring of various development interventions to restrict the spread of such extremist activities. A number of

need based programmes have been taken up in these areas. After long years of implementation of developmental activities in Odisha, it is considered that all regions of the state have not developed equally. Despite repeated efforts to develop all parts of the state, still regional imbalances exist. This has compelled the state government to formulate more effective plans to accelerate the pace of development in these areas. The major sector of focus was construction and furnishing of school buildings, playgrounds, Anganwadi Centres, ANM Centres, Godowns, toilets, PDS shops, provision of pure drinking water facilities, modernization of agriculture, expanding the areas of irrigation, road connectivity, better health care facilities, electrification of more number of villages, provision of credits through public finance institutions to reduce borrowings from private sources at a high rate of interests, provision of better livelihood options by skill development etc. All such efforts require up to date information to get feasible results in the field.

The Government of India under the Ministry of Home Affairs also constituted an empowered group of officers who has the power to modify the existing norms and guidelines for implementation of policies and programmes in consultation with the departments concerned. In this connection, consultation is to be made with the local Member of Parliament on the schemes to be taken up for areas under the LWE. The expenditure in the different projects should be over and above the expenditure being incurred for the above cited State / Central sponsored schemes. The district level committee should ensure no duplication of expenditure on the same schemes.

For effective implementation of all the focused area development policies and programmes, a broad development data base on various sectors is required. To fulfill this need, a noble initiative has been taken up to compile a statistical hand book containing the block wise up to date data base on major sectors of development in these LWE affected areas, which may help the future integrated plans to improve the living standards of the people residing in these areas of whom a major chunk is ST and who are considered to be the most deprived sections of the society. This hand book contains block level data for LWE affected blocks of the state notified by the Home Department of Government of Odisha that includes the data of 118 full blocks and 04 partly affected blocks belonging to 21 districts of the state. Because Gram Panchayat level data are not available, concerned block level data has been incorporated in this book.

This book throws light on the administrative set up of the LWE affected blocks, their demographic profile, literacy rate, gender disparity in their literary status, other vital statistics, educational institutions and infrastructure development. It also gives an insight into agricultural sector, land utilization pattern, irrigation potential, forest land area, cultivable land, operational land holding, crop Insurance, horticulture and irrigation potential. It gives an idea on the housing sector, health and drinking water facilities, credit societies and banks, rural roads, veterinary institutions. Further, it also throws light on the socio-economic sectors like ICDS

project, employment generation programmes under MGNREGA, NRLM, number of beneficiaries in IAY, Mo Kudia, Bijju Pucca Ghar, village electrification status etc. Besides, information those are important but are not available at the block level, are given at the district level with their state averages. Data on working population, workers dependency ratio, IMR, MMR, CDR, CBR, land utilization, yield rate, fertilizer consumption etc, with their respective state averages has also been given. It would help in plan formulation. The plan need to be area specific and should be based on the actual felt need and concerns of the communities living in these remote areas so that peace, harmony and socio-economic progress will come up with equity, justice and dignity.

Hope, this book will be helpful to the planners, administrators, researchers, and academicians to formulate realistic policies and programmes for a balanced and speedy development of these LWE affected areas.
