## PREFACE

One of the Criteria of measuring the level of socio-economic development is the literacy level of the people. It is presumed that higher the rate of literacy, the greater the rate social and economic development of a region or the country. It, thus plays a vital role in achieving the better results from the planning.

The present statistical series on "Literacy amongst tribal communities in the State" based on the 1981 census data spells out the districtwise comparative picture of literacy as found in the tribals. In addition, tribal communitywise break-up of literates and the literacy percentages have also been worked out. It further, provides districtwise and tribal community-wise total population in rural and urban areas and their literacy rates in the State.

I hope that this statistical series high-lighting the districtwise literacy rates of rural/urban areas and the tribal communities will be of immense help to the administrators, scholars and the research workers who find interest in the development of tribals and the tribal areas.
