A COMPARATIVE STUDY OF KOKBOROK, ENGLISH AND BENGALI LANGUAGE

By Mrs. Ajita Tripura

FOREWORD

The thesis paper "The Comparative Study of Kokborok, English And Bengali Language" prepared by Smti Ajita Tripura specially based on Kokborok grammer (syntex level), comparison of Kokborok sentence construction with English sentence construction, pedagogical implications etc.

Considering the needs for development of Kokborok in the State Tribal Research and Cultural Institute has taken an initiative to publish the thesis paper in Book form.

I sincerely thank Smti Ajita Tripura for her effort to work on such resourceful thesis.

I hope this book would be helpful to the linguistic research scholers, readers for in depth study on Kokborok and other tribal languages.

SAILOHNUNA
Director
Tribal Research & Cultural Institute
Govt. of Tripura

Preface

This book is about Kokborok, a Tribal language of Tripura of North-East India belonging to the Bodo-group of languages of the Tibeto-Burman Sub-family of the great Sino-Tibetan Language family. No piece of research work can be done alone. This humble of mine is also no exception. I have received much help from numerous friends and scholars of Kokborok language in the completion of this noble task. Without their help this would have been impossible for me. I wish I could mention all of them here.

In preparing this thesis the person who helped me out from many difficulties is my guide Dr. Shyamal Das. Reader, Deptt. of English, Tripura University (A Central University). I take this opportunity to acknowledge the help offered by my father Sri Shyama Charan Tripura eminent writer and a social activist. I am also heartily greatful to my husband Sri Rabindra Debbarma a social activist and also a playlet writer for all the support I received from him. I am immensely indebted to Sri Kumud Kundu Choudhury, a devout linguist with special interest in Kokborok. Mention must be made of Sri Binoy Debbarma, a pioneer in the field of descriptive study of Kokborok. I would be failing in my duties if I do not mention the names of Sri Naresh Ch. Debbarma (writer), Naphurai Jamatia (social worker and writer) and Sri Amarendra Debbarma (Librarian of TRI) I am also thankful to Sri Ajit Tripura and Joyraj Jamatia who helped me out with computer typing.

Last but not least, I am deeply greatful to my mother loving and understanding children Risha and Salka Debbarma who suffer most on account of my academic ambitions. I dedicated this thesis to them. I hope, this thesis paper will help immensely to the scholars in particular and to the readers in general who evince keen interesting knowting Kokborok.

Ajita Tripura

KB	=	Kokborok
LOC	=	Locative
MV	=	Main verb
N	=	Noun
NOM	=	Nominative
NP	=	Noun Phrase
O	=	Object
P	=	Predicative, also Preposition
PL	=	Plural
PP	=	Prepositional Phrase
PRF	=	Perfective
PROG/PRG	=	Progressive
PRES	=	Present
PT	=	Past
PTP	=	Past Participle
S	=	Subject
TB	=	Tripura Bangla
TV	=	Verb with tense
VP	=	Verb phrase
V	=	Verb
YN	=	Yes-No questions
1PSG	=	First Person Singular
2SG	=	Second Person Singular
3PS	=	Third Person Singular
C	=	Complementizer
CP	=	Complementizer Phrase

TABLE OF CONTENTS

ABSTRACT

Many people of late have got interested in the study of the languages of the North Eastern part of India especially those not belonging to the Indo-Aryan family of languages. Most of these scholars have devoted themselves to spelling out the descriptive realities of these languages. Exceptions are however always there. There is hardly any sustained and systematic effort for explaining the linguistic properties of these languages with the help of the insights available from the researchers in modern linguistics. More over most of these scholars are non-native scholars whose works are always open to suspicion in respect of capturing the subtle nuances of the language concerned.

Against such a backdrop I have decided to look into the various syntactic properties of Kokborok, my mother tongue which is used as a first language by nearly 1.5 million people in and outside the Indian state of Tripura.

Given the limitations of a thesis like this, I have made a humble effort to bring out the syntactic peculiarities of the Yes-No interrogatives in Kokborok vis-à-vis those of English. This is because without understanding the unique properties of one's first language which often interfere with the learning of a second language, one would not be in a position to successfully learn the grammatical nuances of the second language. This will lead to linguistic aberrations so characteristic of inter-lingual systems.

It is found that English and Kokborok use two different parameters in deciding the word order within their phrases: the former is HEAD FIRST while the latter is HEAD LAST. This phenomenon largely decides the word order differences in the two languages. Again, English has a rule of obligatory fronting of the Auxiliary verb having the feature[+Tense]. This is absent in Kokborok. But the latter uses a non-morphemic element de which does not have any fixed denotative value. This element enforces the sense of interrogative ness. This can however be dropped. But there is also a use of rising tone which

cannot be dropped. Interestingly there is another language Bangla also spoken in Tripura. This language too like Kokborok in a HEAD LAST language and uses an apparently semantically empty item ki in its Yes-No interrogatives. In addition, Bangla also does not need to move any obligatory item to the sentence initial position. It is intriguing how these two languages Kokborok and Bangla, one a Sino-Tibetan language and the other an Indo-Aryan, could have such close similarities. More research is necessary to study the phenomenon of typological universals as opposed to the impact of language contact.

Chpater I

Genealogy of Kokborok

1.0 Introduction

"Kokborok is a language of the Bodo sub-group of the Tibeto–Burman sub-family of the Indo-Chinese Linguistic family. It is the first language of about six tribes of the eighteen specified tribes of Tripura." (Dhar 1987). Tracing the origin of this tribal language Chowdhury (1972) states: "It has nine sister languages in greater Assam of the North-East region in India. The names of the sister languages are Bodo (modern), Garo, Dimasa (Kachari), Coch, Mech, Rabha, Hajong and Moran. All these ten languages including KB descended from Proto-Bodo parent stock and the mutual linguistic relations are very much present in those sister languages of Kokborok. Nearly one million KB speakers reside in Tripura and Bangladesh. It has eight dialects namely Puran Tripura, Reang, Jamatia, Noatia, Murasing, Ulsoi (also called Usoi), Kalai and Rupini." These eight dialects constitute Kokbarak (henceforth KB) which was known earlier as Tripuri or Tripura. (cf. Grierson 1967, Vol. III, part II). The genealogical tree below based on Grierson (ibid), Shafer (1955) and Dryer and Buffalo (2000) show the origin and the present location of KB.- (cf. Figure 1)

    Kokborok is a very interesting language. Its linguistic features attracted a number of linguists over the years. Most of these works are mainly descriptive in character. A brief survey of the same is in order. Chattopadhay (1972) has analyzed phonetic, morphemic and syntactic aspects of KB. Saha (1988) focuses on the origin of KB, its sound system, stylistic and grammatical aspects like parts of speech, affixation, antonyms, proverbs and dialogues etc. etc. His analysis of KB sound system addresses primarily the phonetic issues than the phonological ones. Dhar (1983) concentrates mainly on KB syntax particularly its tense system. It is Dhar (1987) where some aspects of KB phonology have been discussed in addition to its touching upon issues like KB morphology, syntax, verbs, PNG features, case,

numerals and classifiers. Chakroborty (1981) presents a short analysis of the formal properties of KB i.e. its phonology, morphology, syntax and semantics. Chowdhury (2006) analyzes, among others, the development of KB from the point of historical and comparative linguistics perspectives. His main thrust is morphological similarities between KB and her cognates. In addition, there are certain pieces of work on KB lexicography. Major among them from the synchronic perspectives are Dhar (1987) and Debbarma (2001). The present study, thanks to its theoretical inclinations, stands apart from all its predecessors. The present work is primarily in the area of syntax more specifically generative syntax. The above genealogical table is based on Debnath (under preparation).

Figure 1.

1.1 Syntax

Syntax refers to the study of sentential properties of language, including its phrase structures, clause structures and various sentence

forms. The study of syntax is traditionally known as 'grammar'. Right from the time of ancient Greek scholars through Bhratrihari's *Vakyapodiya* to Noam Chomsky and other generativists, sentence structure and the mechanism of meaning conveyance has occupied the centre stage in the study of language, the most miraculous gift endowed on human beings as a species.

India is vast country with innumerable language varieties (dialects included). Not much work exists today which paid focused attention to the study of this huge linguistic paradise. People interested in society-related linguistic studies get gravitated towards issues like communication in multilingual situation, bilingualism, language change, dialectology, communicative strategies, pragmatics etc. etc. In the process what remains most neglected are the formal properties and grammatical rules which only the native speakers of a language or dialect know best. There are many languages and dialects for which there is no script, for which there is no educated speaker cum scholar who can write up the formal properties of his/her language. Even if there are some, they are so minuscule in number that they feel insecure as far as their linguistic identity is concerned. More often than not, the social stigma associated with their language, caste or culture is so high that they prefer to merge into the dominant language group and consciously make efforts to forget their own language. The result is language death, so regular and so agonizing. With the loss of language we not only lose a language, the human civilization itself gets deprived for ever from the immense treasure of folk culture, knowledge, literature and lore contained in that language. Every conscious people therefore should come forward to save a language especially if it is endangered. It is with this aim in view that the present scholar got interested to write up systematically the formal properties of KB syntax, especially with the help of the insights of modern research in grammar and syntax.

As far as Kokborok is concerned, this language which originally belongs to some sub-family of Sino-Tibetan family of language. This 'Chinese' language shares many properties – syntactic, semantic, phonological and morphological — with languages like Japanese, Mandarin Chinese, Korean etc. Interestingly, KB is located

3

in an area which is also inhabited by various ethnic groups who speak one or the other version of the descendant languages of Indo-Aryan group of languages. For instance, in Tripura, one of the federal states of India, this language is primarily spoken. KB speakers are also available in many other Indian states and in Bangladesh. This is the one of the two official languages of Tripura, the other being Bangla. Unfortunately, despite having such a huge number of speakers (approximately 15 lacs) the KB speakers could not yet come out with a standard grammar of their own language. Most of the works on KB available today are done by non-KB scholars, most among whom again do not have the formal training to do systematic research. Only Pai (1972, 1976), Dhar (1983) could be taken as instances of systematic study of the syntax of the language. But they have their own limitations as they did not get the benefits of scientific research in language in their own time. Still, these are the two most remarkable works on KB which are however written by non-native scholars. Among the other non-native scholars are Chatterjee (1972), Chakraborty (1981), Saha (1988a, 1988b), Acharya (1983/2001), Acharya (2000), Chakraborty (2000), Chaudhury (2007) etc.

The works of the native scholars, though not very many, certainly are worth- mentioning for their honest and sincere efforts to formally understand their language. These are mainly descriptive studies of the language based on the writers' knowledge of traditional grammar and, as regards phonology, on their personal impressions and perceptions. Debbarma (1967), Debbarma (1977), Debbarma (2001), Debbarma (2002), Debbarma (2006).

Study of all the areas of KB syntax requires a Herculean task and a few dozens of highly devoted and trained scholars, even for a descriptive account of the language. The present scholar's effort in this respect is a very humble one. It seeks to explore the syntactic features of the Yes/No interrogative questions in KB. And in course of doing so, the issue of tense realization, realization of AGR or AGREEMENT features, importance and rigidity vs. flexibility of word order in the language will come up. The methodological approach will be primarily descriptive and comparative. This is because, in addition to being a time tested method for cross-linguistic

4

investigation, we have resorted to this method for examining the role of language contact in bringing about language change.

KB is spoken in areas in Tripura where Bangla is also spoken. In fact the KB and Bangla speakers frequently interact as they live together. For business, commerce, for day-to-day interactions the KB and Bangla speakers go hand in hand. Additionally, Bangla being the principal medium of instruction in the schools which are mostly vernacular, the KB students have to learn Bangla. But they also have to learn English, if not for using the latter as a medium of instructions, but at least as a subject. Faced with such a double challenge of coping two alien systems, they can hardly find their way out. As a result we notice large scale drop-outs among KB students, at every level of learning. This leads to their large scale unemployment, and over all economic and intellectual backwardness despite all official and non-official supports to the contrary.

The need of the hour therefore is to find out the reasons which primarily play roles of hindrances in the over all cognitive development of the KB students. This can best be done by first ascertaining the linguistic properties of KB at various levels like phonological, morphological and syntactic etc. which are at variance with the rules of the two target languages Bangla and English. If this can be done successfully and study materials are produced accordingly followed by requisite training pertained to the language teachers in schools, both vernacular and otherwise, it would be possible to improve the performance of the KB speaking students in the academic and other fields of cognitive development.

The present thesis, though confined only to the syntax of Yes-No questions in KB in comparison to English and Bangla, makes a humble effort in the aforesaid direction.

****

Chapter II

Yes-No questions in Kokborok and English

2.0 Introduction

Kokborok belongs to Sino-Tibetan family of languages which are famous for lexical tone along with strong inflectional morphology. However, one cannot but take into account the factor of language contact which goes a long way in (re)defining the linguistic properties of a system at various levels such as phonology, morphology, syntax, semantics etc. etc. In the absence of any systematic study of KB from the point of view of modern theoretical perspectives, the language remains a great source of mystery. In the present chapter which is one of the core chapters of this thesis, an attempt has been made to explore the syntactic properties of Yes-No (henceforth YN) questions of KB. Comparison with Bangla and English will help us to ascertain the KB features from the point of the impact of language contact and pedagogy. This is because the KB speaking students regularly interact in Bangla language as spoken in Tripura, while they also study English as a subject. Of late, thanks to some English medium schools, they also use English as a medium of instruction. For a better understanding of the problems of KB students in learning English (and also Bangla) the similarities and differences in the syntactic properties of the two languages definitely promises to be revealing. Additionally, of particular interest is the conceptualization and distribution of tense in KB. The lay-out of the discussion therefore follows the traditionally accepted tense sub-groupings of English.

2.1 Present Tense

The traditional distribution of tense of the verb involves three major concepts of time PRESENT, PAST and FUTURE. Each of these major categories is chunked further into four sub-categories: INDEFINITE, PROGRESSIVE, PERFECT and PERFECT PROGRESSIVE. In KB the fourth sub-category is not attested. Hence KB has a total of nine

subcategories into which the continuum of TIME has been chopped up and the concept of time has been represented accordingly in the language. We begin our survey with the subcategories of the PRESENT.

2.1.1 Present Indefinite: Tense marker 'V+ 0'

1. KB: nwng   pora   *de*   swrwng?[1]
         2SG   lesson   INTR   learn
         NP   NP   INTR   VP
         S   O   mVt[2]

         'Do you learn (the) lesson?'

    ENG: Do   you   learn   the   lesson?
          AUX   NP [2SG]   VP   NP [ART N]
          AUX   S   V   O

2. KB: [3]boh   pora   *de*   swrwng?
         3SG   lesson   INTR   learn
         NP   NP   INTR   VP
         S   O   mVt

         'Does (s)he learn (the) lesson?'

    ENG: Does   (s)he   learn   the   lesson?
          AXU   NP[3SG]   VP   NP[ART N]
          AUX   S   V   O

---

[1] In certain variations an existential verb *'tong'* is used both for the Progressive and Indefinite forms. For better clarity we refrain from using the additional verb in the Indefinite forms.

[2] mVt stands for main verb which also carries finite tense. The need for such representation of tax will be clearer from the subsequent sections.

[3] Following the orthographic conventions of English, of late KB-speakers using roman script for writing their language, use capital letter for the initial sound of the sentence-initial word. This we have not used here lest the capital letter is misinterpreted for some other sound in the absence of IPA, which should have been used ideally.

3.	KB:	boh-rok	pora	*de*	swrwng-lai?
		3PL	lesson	INTR	learn -PL
		NP	NP	INTR	VP
		S	O		mVt

'(Do) they learn (the) lesson?'

	ENG:	Do	they	learn	the lesson?
		AUX	NP [3PL]	VP	NP [ART N]
		AUX	S	V	O

4.	KB:	nwng	kaham	*de*	tong?
		2SG	well	INTR	exist
		NP	AP	INTR	VP
		S	P		V

'Are you well?'

	ENG:	Are	you	well?
		VP	NP[2SG]	AP
		V	S	P

5.	KB:	noh-rok	hug-o	*de*	thang-lai?
		3PL	jum-LOC	INTR	go-PL
		NP	PP	INTR	VP
		S	C		mVt

'(Do) you go to (the) jum?'

	ENG:	Do	you	go	to the Jum?
		AXU	NP[2SG]	VP	PP [NP[ART N]]
		AUX	S	V	C

2.2 Issues at stake

Certain interesting things come up from the comparative data sentences of KB and English (1-5) such as role of *'de'*, word order, use of auxiliary, and the mechanism for representing Tense in the two languages. Let us discuss them one by one.

2.2.1 *de/da* and its role in YN questions

'*de*' is an interrogative marker which the native speakers perceive as an independent word though without any fixed meaning and which enjoys mobility within the sentence within certain restrictions. This we designate as INTR i.e. INTEROGATIVE MARKER. Another interesting feature is that it is used only in YN interrogative questions. It is very often accompanied by a rising tone which invariably characterizes an interrogative sentence in KB. But de can also be dropped optionally. Irrespective of the presence or absence of de in KB sentences, the sense of interrogativeness is carried by the presence of the rising tone. The role of *de* therefore can be compared to Bangla ki which is optionally used for example in

6. Bangla   apni <u>ki</u> ekhon jaben?
    OR   apni ekhon jaben ki?
    OR   apni ekhon ki jaben?'
               '(Will) you go now?'

Both de in KB and ki in Bangla do not have any fixed meaning in YN questions; hence they are optionally droppable.

7. Bangla: apin ekhon jaben?
            '(Will) you go now?'

In any case, the presence of a rising tone is a must. We refrain from investigating the issue of the interrelationship between de and rising tone further in this thesis.

2.2.2 de, AUX and Word order

If de is absent in English, the latter has a syntactic unit called AUX i.e. Auxiliary which has no role in KB. As a result the basic constituents of YN interrogative sentences having transitive, non-transitive and copular structures stand as in (8) respectively.

8a. Transitive: Kokborok: S O INTR V
                English: AUX S V O   (cf. 1-3)

9

8b. Intransitive: Kokborok: S C INTR V

                      English: AUX S V C   (cf.5)

8c. Copular: Kokborok: SP INTRV

                      English: VSP   (cf. 4)

Such a distribution of the two items, AUX in English and INTR in KB, has interesting implications for the word order sequence in the two languages. The basic word order pattern for KB, like Bangla, is SOV while for English it is SVO. From the typological point of view KB (like Bangla) is a HEAD LAST language while English is a HEAD FIRST language. So the structure of VP in English is VP → [V[NP]] and in KB is VP → [[NP]V]. To illustrate this distinction based on typological parameter further, one could look into the constituent structures of various phrases in the three languages English, Kokborok and Bangla as shown in (9) below. The head of the phrase is underlined.

9a. English: PP → [P[NP]]   till night
             NP → [N[PP]]   the book of stories
             VP → [V[NP]]   ate rice
             AP → [A[VP]]   nice to see

9b. Kokborok: PP → [[NP] P]   hor jora   'till night'
              NP → [[PP]N]   kothomani bijap 'book of stories'
              VP → [[NP]V]   mai chakha   'ate rice'
              AP → [[NP]A]   nainani⁴ naithok 'nice to see'

9c. Bangla   PP → [[NP] P]   raat porjonto   'till night'
             NP → [[PP]N]   golper boi   'book of stories'
             VP → [[NP]V]   bhat khelo   'ate rice'
   AP → [[NP]A]   dekhte sundor   'nice to see'

---

⁴ In KB the head of the Adjectival Phrase (AP) governs the complement in the GENETIVE which forces the verbal base to convert to N. So literally, English *'to see'* the non-finite form of the verb gets converted to *'of seeing'* i.e *naina-ni* (seeing of). Bangla however differs from KB in this respect and resembles English: *dekhte 'to see'*.

10

It is obvious from (9) that in English the head of the phrase comes at the beginning i.e. the left most position of the phrase. But in KB and Bangla the head of the respective phrases come at the last or the right most position of the phrase. This parametric distinction between English on the one hand and KB & Bangla on the other plays a crucial role in determining the word order variation noted in these languages.

For a greater clarification in terms of distribution of the phrases and their internal make up it would not be out of place here to utilize the mechanism of X-bar syntax expounded in Chomsky (1981a, 1981b, 1986a, 1986b), Stowel (1981), Huang (1982), and Hawkins (1982) etc.

10a. English: PP where P = X

```
                    X"
           /                 \
      Specifier                X'
                          /         \
                       X             Complement
                       |                 |
                      till             night
```

10b. Kokbork: PP where P = X

```
                         X"
                  /              \
               X'                Specifier
            /        \
     Complement        X
         |             |
        hor           jora
```

11

10c. Bangla: PP where P = X

```
                        X"
                       /  \
                      /    \
                   X'       Specifier
                  /  \
                 /    \
         Complement    X
             |         |
            raat     porjonto
```
2.2.3 Tense and Word-order

Coming back to the issue of distribution of AUX in English, this language imposes a mandatory subject-verb inversion in question sentences and the verb in this case is the one which carries the Tense. So we have interrogative structures like VSP ← SVP, the latter being the unmarked word order for basic declarative sentences: 'You are well.' → 'Are you well?' This means that finiteness of the Tense also has a significant role to play in deciding the word order in interrogative sentences in English. This inference is amply substantiated in English structures with complex VPs. A complex VP in this language generally includes one or more than one Auxiliaries. Of these multiple Auxiliaries the one with the feature [+Tense] is moved to the initial position of the sentence in YN questions.

11. Declarative	Interrogative
a. He will come tomorrow.	Will he come tomorrow?
b. They will be coming tomorrow.	Will they be coming tomorrow?
c. John will have been playing chess tomorrow.	Will John have been playing chess tomorrow?

In English non-copular structures where the main verb cannot be moved (for reasons not to be discussed here), a dummy verb popularly known as Auxiliary verb or AUX with the feature [+Tense] is moved to the initial position of sentence to form the interrogative. No such

obligatory movement is required for KB: for example in the English sentences in (1-3) and (4) the AUX from the verb 'Do' is moved to the sentence initial position. Random movement of items resulting in radical scrambling is restricted in English. Movement driven by various transformational rules is a highly regular and rule-governed process in the language. Otherwise, being primarily an analytical language, English normally requires a rigid word order to derive meaning.

By contrast movement in KB is not so restricted and the language displays Case and AGR features both through overt morphology and post-positions and in this respects KB shows greater affinity, once again, to Bangla., than to English.

12. Kokborok nwng ang bai rwng-nog-o thang-nai.
           you I with education-house-to go-will
           NP PP[[NP]P] PP [[NP]P] VP
           S ADVP ADVP V

'You will go to school with me.'

13. Bangla tumi amar Songe skul-e jabe
         you my with school-to/at go-will
         NP PP[[NP]P] PP[[NP]P] VP
         S ADVP ADVP V

'You will go to school with me.'

The two sentences in (12) and (13) agree in all respects: in word order as well as in using both morphological and structural 'case assigners'[5] in the form of P or Post-positions within the PP. As the English translation shows for both the cases English uses PPs with internal structures of [P[NP]]: 'to school' and 'with me'.

An interesting difference however emerges in the three languages in respect of the case type of the NP governed by the P. Let

---

[5] The idea of 'case assigner' is based on Chomsky (1981).

13

us look at the following three instances of PPs without overt morphology (let us call them structural PPs) one each from the three languages under survey. Semantic values of these PPs are same.

14. **English:**
with me

P	I, DAT
[P	[NP]]

Kokborok

ang	bai	'with me'
I, NOM	P	
[[NP]	P]	

Bangla

amar	Songe	'with me'
I, GEN	P	
[[NP]	P]	

For the PP-internal NP the three languages use different cases: English uses the NATIVE Case; KB uses NOMINATIVE Case; while Bangla uses GENETIVE Case. The reason for this difference is open to further investigation and is kept out of the purview of the present thesis.

In (12-13) both 'ang bai' & 'amar Songe' and 'rwng-nog-o' & 'skul-e' are prepositional phrases if translated into English. But in case of 'ang bai' & 'amar Songe' the structure of the PP is clearly spelt out as in an analytical language like English: 'with me'/'I with' PP [[NP] P]. But in 'rwng-nog-o' of which the base is a compound NP 'rwng-nog', the LOCATIVE morpheme –o is suffixed to show its relationship with other words. Same is the fact with the Bangla PP 'skul-e' where the LOCATIVE marker is -e.

Again, the inflectional morphemes –nai in KB 'thang-nai' and –be in Bangla 'jabe' also substantiate the agglutinative nature of KB morphology. This dual status of KB and Bangla in between structural and morphological representation of Case and AGR features promises to be another interesting area of study.

As for Auxiliaries once again, neither KB nor Bangla seems to use any such elements in forming their interrogatives. These helping verbs however acquire crucial syntactic value in a language like English as they both carry and determine the Tense property of the action. Their movement is accordingly very restricted and predictable, since their [+Tense] feature assigns case to the adjacent NPs which normally occupy the subject position. The main verb lacking both Tense and AGR features, remain in its place or *in situ* as far as the Subject NP is concerned. In a transitive construction these main verbs inherently possess an objective case which they must assign to the Object NP. Hence is the reason for the non-movement of the main verbs in English. So, Auxiliary movement is also a significant determiner for the 'free' or 'restricted' movement of words within a sentence. We shall hear more about these properties of 'split VPs' in the subsequent sections.

2.2.4 Verb Morphology and Agreement (AGR)

The next important issue in this comparative discussion is the nature of Tense representation mechanism in KB and English. KB has three major Tenses: Present, Past and Future, unlike English where there is no Future Tense i.e. the sense of futurity in English is represented with the help of auxiliaries, modal, and future-specific words like tomorrow, next year, afterwards etc. etc. For illustrations, look at the sentences 'He will come tomorrow', or 'He is coming next month'. In these two sentences there is no FUTURE suffix added on the verb as in come+PAST = came, or come+PRESENT 'come/s' etc.

Kokborok usually marks the tense features on the main verb provided the latter alone constitute the whole of verbal items in the VP: swrwng 'learn+PRESENT = swrwng' (no overt phonetic marker of the tense suffix, which we hence call zero morpheme or 0); swrwng-kha 'learn+PAST' where the PAST tense is overtly marked by the suffix –kha; and swrwng-nai 'learn+FUTURE' where the FUTURE tense is distinctly marked on the verb in the form of -nai. In this respect of using overt morphology for marking tense on the body of the verb

15

KB resembles Bangla, a language with which the KB speakers have greater proximity and social interactions, than with English. Bangla unlike KB and English marks the PERSON features also on the verb along with Tense. This is illustrated in the following examples from Bangla.

15. **Prsent Tense**

a. ami Sikhi → Sikh + i + SG: V + PRES. (0)+1P (i)+SG (0) 'I learn'
b. tumi Sekho → Sikh+o+SG: V+PRES.(0)+2P(o)+SG(0) 'You learn'
c. Se Sekhe → Sikh+e+SG: V+PRES.(0)+3P (e)+SG (0) 'He learns'

16. **Past Tense**

a. amra Sikhlam → Sikh+l+am+ PL: V+PAST+1P+ PL[6] (0) 'We learnt'
b. tomra Sikhle → Sikh+l+e+PL: V+PAST+2P+PL (0) 'You learnt'
c. tahara Sikhlo → Sikh+l+o+PL: V+PAST+3P+PL (0) 'They learnt'

17. **Future Tense**

a. ami/amra → Sikh+b+o+SG/PL: V+FUTURE+1P+SG/PL
                                        'I/we shall learn'
b. tumi/tomra → Sikh+b+e+SG/PL: V+FUTURE+2P+SG/PL
                                        'You/you shall learn'
c. Se/tahara → Sikh+b+e+SG/PL: V+FUTURE+3P+SG/PL
                                        'He/they shall learn'

In Bangla verbal morphology no GENDER or NUMBER marker is used. Only TENSE and PERSON markers are used. KB verbal forms also use no GENDER marker, but it differs from Bangla in encoding NUMBER features in the verb forms. Both KB and Bangla use TENSE markers on the verb. So the comparative picture that emerges between the three languages can be stated as below.

18.
English: V+TENSE + (PERSON only for 3PSG):
Kokborok: V+ TENSE + NUMBER
Bangla: V+ TENSE + PERSON

---

[6] It is not yet clear why in Bangla verbal morphology the PERSON marker hanges along with TENSE.

Examples:

18a. English: I/You/He (SG/PL)   learnt

18b. Kokborok:

ang/nwng/boh (1,2,3 SG) swrwng-kha (V+SG NUM(0)+TENSE)

'I/You/(S)he learnt'

chwng/nohrog/bohrog swrwng-lai-kha (V+PL-NUM+TENSE)

'we/you/they learnt'

18c. Bangla:

ami Sikhlam	(V+TENSE+ FIRST PERSON)	'I learnt';
tumi Sikhile	(V+TENSE+SECOND PERSON)	'you learnt';
Se Sikhlo	(V+TENSE+ THIRD PERSON)	'he/she learnt'
amra Sikhlam	(V+TENSE+FIRST PERSON)	'we learnt'
tomra Sikhle	(V+TENSE+SECOND PERSON)	'you learnt';
Se Sikhlo	(V+TENSE+ THIRD PERSON)	'they learnt'

So the summary is that of the AGR or Agreement features between the verb and the subject NP, English uses only one on the verb i.e. TENSE; KB uses two TENSE and NUMBER; and Bangla also uses two TENSE and PERSON. The process of simplifying the complex AGR morphology has reached various stages of degree in the three languages.

17

Chapter III

Progressive Tense Constructions

3.0 Introduction

The picture of word order and verb morphology in KB YN questions starts getting complicated when we move on to examine the representation of complex time concepts in the language. In this respect we shall discuss the various progressive forms in the language vis-à-vis English and Bangla.

3.1 Present Progressive: Tense marker '*mV-wi tV-0*'

In the progressive tense Kokborok splits up the VP between the main verb and an additional verb '*tong*' which independently means 'to exist'? This verb which we call 'tensed verb' or 'tV', as opposed to the main verb or 'mV', functions like an AUX and also carries the finite tense. However, the progressive suffixal morpheme –*wi* is attached to the main verb. In addition to tense, the tV also carries the distinctive markers of NUMBER: 0 for SINGULAR and –lai for PLURAL. *de* continues to play its role as INTR and the word order of the sentence remains the same as it is in case of indefinite tense. The following examples illustrate this.

19. **KB:** nwng pora *de* swrwng-*wi* tong?
    2SG lesson INTR learn-PRG exist
    NP NP INTR VP
    S O mV tV

    'Are you learning the lesson?'

    ENG: Are you learning the lesson?
    AUX NP[2SG] VP[V-PRG] NP[ART N]
    AUX S V O

18

20. **KB:** bo   pora   swrwng-*wi*   *de*   tong?
              3SG   lesson   learn-PRG   INTR   exist-SG
              NP   NP   VP   INTR   V
              S   O   mV   tV
              '(Is) she/he learning (the) lesson'?

     ENG: Is   she/he   learning   the lesson
              AUX   NP[3SG]   VP[V-PRG]   NP[ART N]
              AUX   S   V   O

21. **KB:** boh-rog pora   swrwng-*wi*   *de*   tong-lai?
              3PL   lesson   learn-PRG   INTR   exist-PL
              NP   NP   VP   INTR   V
              S   O   mV   tV
              '(Are) they learning (the) lesson?'

     ENG: Are   they   learning   the lesson ?
              AUX   NP[3-PL] VP[V-PRG]   NP [ART N]
              AUX   S   V   O

3.2 Past Continuous: Tense Marker '*mV-wi tV-mani*'

The picture remains the same even for past progressive forms with
the exception that the sense of pastness is encoded on the body of the
tV in the form of the suffixal form –mani. The order of suffixation
between the PERSON and NUMBER morphemes, follows the pattern:
tV+0+mani for SINGULAR, and tV+lai+main for PLURAL. These
KB facts are exemplified in the following interrogative sentences.

22. **KB**: nwng   pora   swrwng-*wi*   tong-*mani*   de?
              2SG   lesson   learn-PRG   exist-PT   INTR
              NP   NP   VP   V   INTR
              S   O   mV   tV
              'Were you learning (the) lesson?'

19

ENG:	Were	you	learning	the lesson?
	AUX-PT	NP[2SG]	VP[V-PRG]	NP[ART N]
	AUX	S	mV	O

23. KB:

boh	pora	swrwng-*wi*	tong-*mani*	*de?*
3SG	lesson	learn-PRG	exist-PT	INTR
NP	NP	VP	V	INTR
S	O	mV	tV	

'Was she/he learning the lesson?'

ENG:	Was	she/he	learning	the lesson?
	AUX-PT	NP[3SG]	VP[V-PRG]	NP [ART N]
	AUX	S	mV	O

24. KB:

boh-rog	pora	swrwng-*wi*	tong-*lai-mani*	*de?*
3-PL	lesson	learn-PRG	exist-PL-PT	INTR
NP	NP	VP	V	INTR
S	O	mV	tV	

'Were they learning the lesson?

ENG:	Were	they	learning	the lesson?
	AUX-PT	NP[3PL]	VP [V-PRG]	NP [ART N]
	AUX	S	mV	O

25. KB:

noh-rog	ri	sw-wi	tong-lai-mani	*de?*
2-PL	cloth	wash-PRG	exist-PL-PT	INTR
NP	NP	VP	V	INTR
S	O	mV	tV	

'Were you washing cloth?'

ENG:	Were	you	washing	cloths?
	AUX-PT	NP[2PL]	VP[V-PRG]	NP[N]
	AUX	S	mV	O

20

3.3 Future Progressive: Tense Marker: *'V-wi tong-nai'*

In future progressive tense, as usual, the sense of progressiveness is doubly realized by the progressive suffix attached to the mV and the presence of the existential verb i.e. tV tong. But the sense of FUTURE is encoded by the morpheme attached to the tV that also implies the finiteness of the TENSE. The following set of KB data juxtaposed with their English counterparts bears this out.

26. **KB:** nwng   pora   swrwng-*wi*   tong-*nai*   *de?*
     2SG   lesson   learn-PRG   exist-FT   INTR
     NP   NP   VP   V
     S   O   mV   tV
     '(Will) you be learning the lesson?'

     ENG: Will   you   be   learning   the lesson?
     AUX   NP   VP [AUX V-PRG]   NP[ART N]
     AUX   S   V   O

27. **KB:** boh/bo   pora   swrwng-wi   tong-nai   de?
     3SG   lesson   learn-PRG   exist-FT   INTR
     NP   NP   VP   V
     S   O   mV   tV
     '(Will) he be learning the lesson?'

     ENG: Will   she/he   be   learning   the lesson?
     AUX   NP   VP[AUX V-PRG]   NP [ART N}
     AUX   S   V   O

28. **KB:** boh-rog   pora   swrwng-*wi*   tong-*lai-nai*   *de?*
     3-PL   lesson   learn-PRG   exist-PL-FT   INTR
     NP   NP   VP   V
     S   O   mV   tV

     '(Will) they be learning (the) lesson?'

21

        AUX   NP   VP[AUX V-PRG]   NP [ART N]
        AUX   S   V   O

29. **KB:** noh/no-rog sa   pung samung tang-*wi* tong-*lai-nai de?*
      3-PL   day - whole   work   do-PRG   exist-PL-FT INTR
      NP   [NP A]   NP   VP   V
      S   ADVP   O   mV   tV

`(Will) you be doing the work the whole day?'

    ENG: Will   you   be   doing   the work whole day?
        AUX   NP   VP [AUX V-PRG] NP   ADVP
        AUX   S   V   O

3.4 Issues of interest

In consequence of the examination of the various types of complex VPs of KB in relation to their TENSE (PRESENT, PAST and FUTURE) and ASPECT (in this case PROGRESSIVE) the following observations are in order.

Like English KB also splits up the verbal elements and assigns them distinct duties. For example, English uses what is called a helping verb or Auxiliary verb or AUX as in the element on the left of the mV+ing in 'is/are mV+ing' for the present progressive, 'was/were mV+ing' for the past progressive and 'will/shall be mV+ing' for the future progressive. Among these in 'will/shall be mV+ing' we notice the involvement of an additional element i.e. a modal *(will/shall)* before the 'be' verb to convey in particular the sense of the FUTURE. KB resembles in splitting up the VP into two verbs as shown below:

30.   **SINGULAR**
      A-V1   B-V2
  a)   mV-wi tV-0   (PRESENT PROG.)
  b)   mV-wi   tV-mani   (PAST PROG.)
  c)   mV-wi   tV-nai   (FUTURE PROG.)

31. **PLURAL**

	A-V1	B-V2	
a)	mV-wi tV-lai		(PRESENT PROG.)
b)	mV-wi	tV-lai-mani	(PAST PROG.)
c)	mV-wi	tV-lai-nai	(FUTURE PROG.)

where tV= tong.

A clear pattern emerges from the study of the verbal forms. All the verb forms both for singular and plural in column A contain the main verb (semantically) suffixed by a fixed morpheme *–wi* signifying the PROGRESSIVE-ness of the action. The second column contains the existential verb *-tong* which is also fixed. For signifying the SINGULAR-ness there is no verbal suffix attached to this second element of the VP. A fixed PLURAL morpheme *–lai* is used however to indicate the distinction from singular forms. As for ASPECT markers KB uses no overt morpheme to indicate the PRESENT PROGRESSIVE. For PAST PROGRESSIVE however there is a fixed suffix namely *–mani* while the same for FUTURE PROGRESSIVE is *–nai*.

    The next theoretical issue that crops up is 'Can this second verbal form bearing the AGR features (TENSE and NUMBER) be considered as at par with the putative AUX in English?' Before jumping into a conclusion let us make a survey of the state of affairs in the verbal morphology of Bangla, the next door neighbour of KB. This time we however avoid looking at standard Bangla. Instead, the form of dialectal Bangla which is spoken in Tripura (i.e. in and around Agartala) and which is popularly known now-a-days as Tripura Bangla or TB will be of greater help for us in respect of the matter under study at this point. We begin our investigation with a set of literal equivalents for the verbal forms in (30-31).

32. 3P.SINGULAR/PLURAL

A-V1   B-V2
a) mV-te tV-aas-e (PRES. PROG.) e.g. zaite aase → zaitase 'is/are going'
b) mV-te tV-aas-l-o (PAST PROG.) e.g. zaite aaslo→ zaitaslo 'was/were going'

c) mV-te tV-thak-b-o (FUT. PROG.) e.g. zaite thakbo → zaite thakbo 'will be going'

As we have noticed already, Bangla marks TENSE and PERSON on the verb through overt morphology while KB marks TENSE and NUMBER. Since the distinction between the PERSON- and NUMBER-signifying morphemes are of no theoretical consequence at this point of discussion, we avoid giving a detailed account of the Bangla PERSON morphemes glued to the verbal base. It suffices us to look at only one PERSON marker i.e. the unmarked 3P, whose singular and plural forms are identical as the language ignores number distinctions.

In the examples in (32) the main verb mV is *zai* 'go'; with this verbal root the infinitive morpheme –*te* is added lending the meaning to the mV *'to go'*. The second verbal root, surprisingly enough, is an existential verb (as it is in KB) 'aas'. This second form takes the TENSE and PERSON markers in the same order i.e. V+TENSE+PERSON. So for present tense third person we have aase, for past tense aaslo, and for the future thakbo. This verbal root 'thak' is semantically equivalent of aas, though historically comes from a different root. Subsequently sandhi collates the two verbal elements into one rendering *zaitase* 'is/are going', *zaite aaslo* → *zaitaslo* 'was/were going'. No sandhi is possible in *'zaite thakbo'*.

Let us now look into the semantics of these verbal formations. Answering this question will bring us back to the mystery behind the existential verb being used in KokBorok, Tripura Bangla and also English. The semantic value of the TB VP *'zaitase'* ← 'zaite aase' can be delved into like the following: aase means something exists; and zaite means 'something is in the condition of going'. So the phrase 'zaite aase' refers to 'something exists in the state of going'. Now let us consider the semantics of KB VP 'thang-wi tong'. The KB phrase is an exact transliteration of the TB phrase. The verb root thang means 'to go'; the morpheme –*wi* stands for the sense of progressiveness i.e. something in the condition of going; the existential verb tong means 'exists'. So the total signification of the KB phrase is 'something

exists in the condition of going'. The English counterpart of the KB and TB phrases 'is going' also refers to the same semantic implication i.e. something exists (is < be; cf. SKT bhu 'to be') in the condition of 'going'.

Going by the above discussion, it seems alluring to conclude that the second verbal element is KB VPs i.e. tV is doing the function of an auxiliary or AUX. But the matter requires further investigation since in Tripura Bangla and in Bangla in general there is a class of verbs which are called 'compound verbs' such as

33. Compound verb	literal translation	meaning in use
theke za	'staying go'	stay back
eshe za	coming go	come back
eshe poR	coming fall	come
more za	dying go	die
phele de	throwing give	throw away
jete de	to go give	allow to go
haste za	to laugh go	to laugh
dekhe phel	seeing throw	to see
jete thak	to go keep	keep going
jete aache	to go has/is	keep going

Formally these compound verbs of Bangla resemble the KB VPs, semantically there are lots of differences between the two. There is a fixed existential verb *'tong'* that carries the TENSE as well. Again the suffix –*wi* attached to the mV gives a fixed sense of PROGRESSIVE-ness. It would not be sensible and factual to call these verbs 'compound verbs'. The notion of an existential verb referring to the condition of the Subject NP sounds much more logical and viable.

To sum up, the split VPs found in KB are not like the compound verbs attested in Bangla; nor can the tV be justifiably called an AUX. This is a phenomenon unique to KB.

****

25

Chapter IV

Syntax of the Perfectives

4.0 Introduction

The Perfectives in Kokborok like Progressives have some have some unique properties. This uniqueness is primarily confined with in the VP. Hence the general word order that we have noticed for the Indefinite and Progressive structures in KB remains unaffected. The INTR de continues to behave with its mobile property around the VP.

4.1 Perfect Tense

As a point of departure let us look at the following set of Kokborok sentences along with their English counterparts.

4.1.1 Present Perfect: Tense Marker 'mV tV(paih)-kha'

34.	**KB:**	nwng	pora	swrwng-wi	paih-kha	*de?*
		2SG	lesson	learn-PRG	finish-PRF	INTR
		NP	NP	VP	V	INTR
		S	O	mV	tV	

'(Have) you learnt (the) lesson?'

	ENG:	Have	you	learnt	the lesson?
		AUX	NP[2SG]	VP[V-PRF]	NP[ART N]
		AUX	S	V	O

35.	**KB**:	boh	pora	swrwng-wi	paih-kha	*de?*
		3SG	lesson	learn-PRG	finish-PRF	INTR
		NP	NP	VP	V	INTR
		S	O	mV	tV	

'(Has) she/he learnt (the) lesson?'

	ENG:	Has	he	learnt	the lesson?
		AUX	NP[3SG]	VP [V-PRF]	NP [ART N]
		AUX	S	V	O

36. **KB:**

boh-rog	pora	swrwng-wi	paih-lai-kha	*de?*
3-PL	lesson	learn-PRG	finish-PL-PRF	INTR
NP	NP	VP	V	INTR
S	O	mV	tV	

'(Have) they learnt (the) lesson?'

ENG:

Have	they	learnt	the lesson?
AUX	NP[3PL]	VP [V-PRF]	NP [ART N]
AUX	S	V	O

37. **KB:**

noh-rog	mai	chah-wi	paih-lai-kha	*de?*
2-PL	rice	eat-PRG	finish-PL-PRF	INTR
NP	NP	VP	V	INTR
S	O	mV	tV	

'(Have) you eaten rice?'

ENG:

Have	you	eaten	rice?
AUX	NP[2PL]	VP[V-PRF]	NP[ART N]
AUX	S	V	O

As we notice above the VP for the Present Perfect tense in KB is constituted of an mV i.e. the main verb followed by the tensed-verb or tV which is a fixed one. This verb is suffixed by –*kha* the putative past marker. In case of plural form the plural marker –*lai* is suffixed between tV and the 'past' tense marker –*kha*.

The matter to be noted is that the mV is used with a suffix –*wi* which denotes PROGRESSIVENESS (cf. Chapter III). The fixed tV paih which has an allomorphic variant in –*bai*, meaning 'finish' with the feature [+Tense] in –*kha* denotes the completion of a work. But this sense of completion is contradicted by the PROGRESSIVE suffix –*wi* attached to the mV. The question then arises 'How do the KB speakers conceptualize the Present Perfect-ness of the verb?' Semantically the complex VP for the Present Perfect tense in KB is: 'MAIN VERB+PROG. TENSED VERB +PAST'!

Employing the insights of gerundives in English having the form 'V+ing = NP' one can easily interpret the mV+PROG part in KB as an OBJECT NP for the tV paih meaning 'finish' which is also

an transitive verb. Since we have already established that KB is a HEAD LAST language, the KB Present Perfect VP can be reinterpreted as [[NP]V]. Translated into English, a KB declarative sentence say, *'boh-rok pora swrwng-wi paih-lai-kha'* reads like 'they have finished learning the lesson'. However alluring this interpretation might sound this is also erroneous. This is obviated if we remove the NP pora or the lesson from the sentence.

38.   a. **KB**: *boh-rog swrwng-wi paih-lai-kha
        b. **ENG**: *They have finished learning.

If 'learning' is interpreted as an NP then the sentence would have been grammatically acceptable since the LF requirement of the transitive verb 'finish' would have been fulfilled by 'learning' the gerundive NP. But this is not the case. The sentence (38b) can be easily redeemed if an NP is supplied after 'learning'. That means the verbal root of 'learning' i.e. 'learn' by the principle of C-selection must have an NP at the LF as well as PF as its Object complement. In other words the word 'learning' continues to function as a verb only, not as a noun. In terms of Case theory of GB, there will be fatal error to treat learning as a noun because in that case the NP 'lesson' will not get any Case and an NP minus Case is never parsed. The same argument holds for Kokborok.

Summary of the discussion therefore is that the semantic interpretation of the KB VP in the Present Perfect form needs to be interpreted semantically as 'an action which has been continuing for some in the recent past, has come to an end'. This interpretation however is far from definitive.

4.1.2 Past Perfect: Tense Marker: *'V paih-jak'*

In the Past Perfect form the PROG. suffix *–wi* is dropped and the mV appears in bare form i.e. without any overt inflectional morpheme. Additionally with the tV a suffix *–jak* is added. The PLURAL marker *–lai* continues to hold its position immediately after the *tV paih* and before *–jak*. These facts of KB are illustrated by the following set of data.

39. **KB**:
nwng	pora	swrwng	paih-jak	*de*
2SG	lesson	learn	finish-PRF	INTR
NP	NP	VP	V	
S	O	V		

'Had you learnt the lesson?'

ENG:

4.1.3 Future Perfect: Tense Marker: *'V-bia/paih tong-nai'*

In this form of the YN interrogatives, once again the moot point turns out to be the internal make of the VP. An interesting development takes place here? The mV is affixed (or compounded?) by the verb *paih (/bai)* and thus brings in a shade of meaning of 'finish' or having finished a work etc. More surprises awaits us however. The existential verb *'tong'* is introduced again as the tV and it is suffixed with the putative FUTURE marker -nai. They can appear on either of the sides of the VP. As for PLURAL marker *–lai* for all persons continues to hold its position in between the tV root and the suffixal morpheme –nai. The following sentences attest these facts of KB.

41.

KB:	nwng	pora	swrwng-bai[7]	tong-nai		*de?*
	2SG	lesson	learn-end-PRF	exist-FT		INTR
	NP	NP	VP	V

        NP   [NP   P]PP[NP P]PP   VP   V
        S   ADV   C   mV   tV
        '(Will) you have reached (at) home in time?'

ENG: Will   you   have   reached   home   in time?
         AUX   NP[2SG]   VP[AUX V PTP]   NP   PP[P N]
         AUX   S   V   C   ADV

45.
KB: noh-rog sanja-ni swkang   samung tang-bai tong-lai-nai   *de?*
        2-PL sunset-(GEN) before   work do-end-PRF exist-FT   INTR
        NP   [NP   P]PP   NP   VP   V   INTR
        S   ADV   O   mV   tV
        '(Will) you have finished the work before sunset?'

31

ENG:	Will	you		have finished	the work	before sunset?
	AUX	NP[2PL]	VP[AUX V-PTP]		NP	PP[P NP]
	AUX	S		V	O	ADV

Point to be noted is that there are as many as three verbs in the VP for the Future Perfect Tense presented as the following.

46.   **KB**: [[[swrwng]-[pai]] [[tong]-nai]]
       ENG: [[[learn]-[finish]] [[exist]-FT]]

Paraphrased into English the VP will read as "'Somebody 'learn-finished will exist'" i.e. the subject will exist having finished his/her/their learning. For more discussion from the comparative perspective let us move on to the next section.

4.2 Differences in realization of Tense between KB and other languages

Cross linguistically use of multiple verbal items within the VP for giving expression to complex concepts of temporal entity is nothing new. But while it is possible for a native speaker to acquire and apprehend the subtle nuances or shades of meaning carried by each of the morphemes, whether agglutinative or structural, it becomes immensely difficult for the non-native users of the language. The non-native learner of the language will have to reorient himself or herself to get at the underlying conceptualization process of the native speakers. And quite understandably this is easier said. But does it mean that there is nothing common in the interpretation and understanding of the reality among the people speaking various languages? This is certainly not true as it goes against the principle of linguistic, or more appropriately, cognitive universals. As members of the same species human beings certainly share some common features in their conceptualization and interpretation of the reality. Let us have a closer look at the VPs of KB for various forms of Perfectives and compare them with those of English and Bangla.

47. Present Perfect

Language	Form of VP	Illustration	Gloss
1. KB	mV-wi tV(paih)-kha	swrwng-wi paih-kha	Learn-ihg finish-Past
2. English	AUX-T mV-PTP	has learnt	has learn+PTP
3. Bangla	mV-NONF exist-3P	Sikhia-ache>Sikheche	After learning exists

48. Past Perfect

Language	Form of VP	Illustration	Gloss
1. KB	V paih-jak	swrwng paih-jak	learn finished
2. English	AUX-PT-PRF VP[V-PTP]	Had learnt	
3. Bangla	Same as Past Indefinite		

49. Future Perfect

Language	Form of VP	Illustration	Gloss
1. KB	V-bia/paih tong-nai	swrwng-bai tong-nai	Learn-finish exist will
2. English	AUX VP[AUX V-PTP]	will have learnt	
3. Bangla	mV-NONF exist FT 3P	Sikhia thakbe >Sikhe thakbe	After learning will exist

Though semantic analysis is out of the purview of the present study, it is obvious from the study of the VPs of the three languages for the three forms of the Perfect Tense and their corresponding gloss, that all the three languages use multiple verbal items to express the complexity of the concept of time. In English the use of modals like *shall/will* followed by the AUX followed by the mV in Past Participle or PTP form is the standard for the future perfect. KB also uses three verbs *'swrwing'*, *'bai'* and *'tong'* followed by the Future marking suffix –*nai*. Thus although it is not yet certain whether the tV in KB should be given the status of an AUX, we notice definite similarity in the concept formation and linguistic representation of this chunk of temporal entity in the two languages. Bangla in this respect uses only two verbs Sikh-ia thak-b-e. The suffix –*ia* means 'having done/ finished' and can be considered as semantic equivalent of paih in KB. The Bangla verb thak means 'to stay' or 'to exist'; and thus is the semantic equivalent of 'tong' in KB. So with two suffixes one each for the mV and the tV, Bangla captures the idea of Future Perfectness. Both English and KB uses three verbs (considering *'paih'*

as a verb here) and one suffix — with the mV in English and with tV in Kokborok.

Similarly, for the Past Perfect KB uses 'mV tV-jak' where the main verb is used in the bare form while the tV is suffixed with –jak. The picture in English is slightly different: English uses AUX+Tense and mV+PTP i.e. two verbs and two suffixes. Bangla makes no representational distinction between Past Indefinite and Past Perfect, although conceptually, difference is clearly discernible to any native speaker.

The most democratic distribution in terms of the number of verbal items and their suffixal items across the three languages under study is noticed in the case of Present Perfect. Here KB uses *mV-wi tV-kha*. That is, two verbs and two suffixes. So does English: have+tense and mV + PTP. In case of Bangla the mV carries the NON-FINITE suffix –ia and the existential verb aach+3P.

****

Chapter V

Pedagogical Implications

5.0 Introduction

In this concluding section we shall see how the findings of our research can help us in teaching English as a second language better. But before that let us have a brief look at the scenario of language learning practices and methods which dominated the area for the last one hundred years at least.

5.1 Issues of interest

The issue of an effective method of teaching a second or foreign language is still a burning one. People have been doing research in this area for more than one hundred years now. As a result we have seen the emergence of many theories of language teaching and learning. These include the age old Grammar Translation Method, Audio-Lingual Method, Situational Language Teaching, Communicative Language Teaching, Total Physical Response, the Silent Way, Community Language Learning, the Natural Approach, Suggestopedia etc. All theories leak, goes the saying. So no theory is foolproof. Every theory while implemented comes up with certain limitations. These limitations are subsequently sought to be remedied. And this gives birth to a new theory. Of course behind every such theory there is an approach at work and that approach in its turn is born of certain central premises about the nature and operational mode of human language. So the people admiring the Grammar Translation method looked upon language primarily as a matter of reading and writing. Being the oldest, its primary objective was to equip the learners with the essential information about the grammatical rules of the target language and give them sufficient training in translating from the first language to the second language and vice versa. They addressed only two of the four skills of language learning i.e. Reading and Writing. This is because their primary goal was to enable the learners to read and understand the classical literatures of ancient

Greece and Rome. The other two methods namely Listening and Speaking were never regarded as relevant for language learning. With the arrival of the Audio-Lingual method based on the Structuralist premises, all the four skills came into focus. But this method failed as it neglected the role of mind in language learning. For this school of applied linguists language learning is primarily a process of habit formation based of stimulus-response theory. As a reaction to this method of second language teaching came the mentalist approach called the Communicative Language Teaching. This method gives primacy to communicational proficiency, grammar rules are treated as secondary and error-correction was hardly ever resorted to, if at all. This is because according to this school, hugely influenced by the generativist school of linguists, believe that all human babies are inherently equipped with a Language Acquisition Device or LAD. This device is activated when linguistic inputs start coming in resulting in the child's learning of the language/s to which it is exposed in its early and formative years. Grammar rules follow automatically, as the learner goes on forming its own 'growing grammar' and gets it corrected and refined through checking and cross-checking with the elders who are the model of native speakers for the child.

But even this method failed to prove itself successful across the board in all situations and all places. As of now no method could prove itself cent percent effective in all times and places. Hence a combinatorial approach according to necessity is the in thing in language pedagogy across the world today. Along with fluency of communication learning the rules of grammar and regular practice (drills) are also emphasized on.

In India, in fact this combinatorial approach is found to be most effective because of the immensely diverse nature of the learners in a highly populated multi linguistic situation. From my own experience as a practicing teacher of English, I also believe that along with communication, learning grammar rules of the target language is of equal importance. Without this no language learning can achieve its desired goal. For doing so, a crucial step would be to make the learners aware of the differences in grammatical forms and devices in the two languages. The rules of the native language automatically

intervene with the rules of the second language. This is because whenever necessary the learners tend to subconsciously supply the linguistic forms and rules of their first language to the second language. This is particularly true of second language learners. This cross-linguistic application of rules is what we popularly term as 'errors' and penalize the learners for such aberrations. A serious study would reveal that these errors are not idiosyncratic or random. On the contrary they are highly systematic reflecting the interlingual grammar of the learners.

5.2 Similarities and Dissimilarities between Kokborok and English

The Kokborok speaking students in Tripura are today confronted with multiple challenges. They have to learn both Bangla and English, both as second languages. While for the former they get many 'teachers' around them in the form of the Bangla speakers around them, for the latter there is hardly any atmosphere conducive to language learning outside the classroom. But what does a poor teacher do alone in the class where the number of learners far out number the ideal ratio of 1:20 i.e. one teacher for twenty learners at a time. More over the learners come from varied linguistic backgrounds each having its own first language grammar in their mind.

Still, taking up the issue of teaching English only to the KB students, the teacher would do well to equip herself/himself with the rules of both KB and English. Unfortunately, no such standard grammar book exists for KB written with a pedagogical intention. The ones available deal mainly with grammar structures to be memorized. They do not reveal the under lying rules behind such systems which can be compared and contrasted with the rules of the target language i.e. English.

As we have seen in chapters II and III, in forming the YN interrogative sentences KB and English adopt different strategies and this results in varied word orders in the two languages. Let us enumerate some of them here.

Imperatives in English need obligatory fronting of the Tensed verb i.e. to the left of the subject NP and at the beginning of the

sentence. In case of copular verbs which also bear the Tense, the main verb itself is fronted. In non-copular constructions a dummy verb called AUX in the form of be/do/have is created and is endowed with Tense and AGR features. This verb is then fronted to the initial position of the sentence. This renders the English YN constructions as AUX S (V) O/P illustrated below.

51.   Are you fine?
       Do you know me?
       Have you done the work?

When there are multiple auxiliaries the one with the Tense and AGR features is fronted.

52.   Will you be writing the letter?
       Will he have reached home by this time?

In KB there is no need for any such fronting. No helping verb is needed for the indefinite form (cf 53 below). The helping verb tV which also carries the Tense and AGR features can remain *in situ* i.e. within the VP. Significantly, the tV never can come even before the mV – a phenomenon we interpreted as because of the strong parametric choice made by KB for being a HEAD LAST language. The putative question item de which is equivalent to Bangla *ki* appears either before or after the VP.

53.   nwng   pora   *de*   swrwng?
       you   lesson   learn
       'Do you learn the lesson?'

54.   nwng   kaham   *de*   tong?
       You   fine   are
       'Are you fine'

55.   boh   pora   swrwng-kha *de?*
       He   lesson   learnt
       'Did he learn the lesson?'

56.   nwng   pora   swrwng-nai *de?*
       You   lesson   learn will
       'Will you learn the lesson?'

As we see in (53-56) no additional verb is used for the indefinite forms. This is true even for copular constructions like (54). So the

38

points of difference between KB and English infinitive structures for YN interrogatives can be summed up as in (57) below, re-presented from (8) above.

57a. Transitive: Kokborok: S O INTR V
                      English: AUX S V O   (cf. 1-3)

57b. Intransitive: Kokborok: S C INTR V
                      English: AUX S V C   (cf.5)

57c. Copular: Kokborok: SP INTRV
                      English: VSP   (cf. 4)

Kokborok however also uses a helping verb in the form of what we termed tV. But that of necessity remains within the VP and occurs immediately after the mV which is [—Tense] and [–AGR]. Verbs like *paih-kha* (58), *paih-jak* (59), *tong-nai* (60), *tong-mani* (61), *tong* (62) and *tong-nai* (63) are all examples of tV in Kokborok.

58.   nwng   pora   swrwng-wi   paih-kha   *de?*
       2SG   lesson   learn-PRG   finish-PRF   INTR
       NP   NP   VP   V   INTR
       S   O   mV   tV
       '(Have) you learnt (the) lesson?'

59.   nwng   pora   swrwng   paih-jak   *de*
       2SG   lesson   learn   finish-PRF   INTR
       NP   NP   VP   V
       S   O   V
       'Had you learnt the lesson?'

60.   boh   pora   swrwng-bai   tong-nai   *de?*
       3SG   lesson   learn-end-PRF   exist-FT   INTR
       NP   NP   VP   V   INTR
       S   O   mV   tV
       '(Will) she/he have learnt (the) lesson?'

39

61.

Nwng	pora	swrwng-wi	tong-mani	*de?*
2SG	lesson	learn-PRG	exist-PT	INTR
NP	NP	VP	V	INTR
S	O	mV	tV	

'Were you learning (the) lesson?'

62.

nwng	pora	*de*	swrwng-wi	tong?
2SG	lesson	INTR	learn-PRG	exist
NP	NP	INTR	VP	
S	O		mV	tV

'Are you learning the lesson?'

63.

nwng	pora	swrwng-wi	tong-nai	*de?*
2SG	lesson	learn-PRG	exist-FT	INTR
NP	NP	VP	V	
S	O	mV	tV	

'(Will) you be learning the lesson?'

The dissimilarity between KB and English in respect of the formation of the VP for YN interrogatives can be summarized as below.

64.
   a. Kokborok: S   O   mV   tV
   b. English: tV   S   mV   O

For the sake of uniformity of representation and greater clarity we involve the other functional categories like S O and represent AUX in English as tV. This word order distinction between English and KB is the crucial piece of information that everybody involved in the business of teaching of English to the KB students must be familiar with.

The dissimilarities between the two languages are galore especially at the phonological and morphological levels. But at the syntactic level these do not concern us here directly.

One phonological similarity however is too obvious to ignore. In all the languages we have considered in this thesis use of a rising tone in the YN interrogatives is common. While for English no extra item is used other than the AUX and word order reshuffling, in KB

and Bangla, word order is not affected much. But instead we see an additional element being used *de* in KB and *ki* in Bangla. These do not have any direct denotative semantic value. But these apparently meaningless words lend an extra force to the interrogative sense of the sentences. That it can be dropped also, is perhaps because of this property of morphological emptiness of it. In no case the rising tone can be dropped or substituted. This aspect of sentential tone remains a mystery and awaits future research. This is particularly because languages belonging to *Sino-Tibetan* family are notorious for having *lexical tone*.

5.3 Implications for teaching English

Influence of mother tongue on the acquisition process of second language has for long been a major topic of research in applied linguistics. It has been established by researchers that in spite of all possible efforts made by the second language learners at the most only 5% of them can acquire native like competence in the target language. For the rest, learning of the language remains incomplete with varying degrees of approximation towards the target language. Linguists give various names to this incomplete state of second language learning such as 'transitional competence' (Pit Corder 1967) 'approximative system' (Nemser 1971), 'interlanguage' (Salinker 1972) etc. Although mother tongue influence is not the sole ingredient in constituting the so called 'affective filter' that hinders the acquisition of native like perfection in the target language, it is certainly a major factor to reckon with. Mother tongue pull manifests itself in many forms and can affect any module of linguistic system: phonological, morphological, syntactic and even discoursal.

In the present dissertation we have confined ourselves to finding the similarities and dissimilarities between KB and English (and occasionally Bangla) in respect of a) word order differences, b) realization of tense and c) the mechanism for capturing interrogativeness in YN questions. While English uses AUX verb or modals fronted to the sentence initial position, KB avoids both. On the contrary KB uses a non-morphemic unit *de* to capture the sense

41

of interrogativeness. In addition, in non-indefinite structures the internal make up of the VP is augmented by incorporating either an existential verb (for present tense), a 'completion' verb meaning 'end or finish' along with appropriate morphological items. Though a humble piece of effort as such this work can go a long way in throwing some light on how the KB students can be helped better in acquiring this aspect of the English language and will hopefully cease to commit any so called 'error'. This can be a useful piece of information also for the teachers, researchers and above all the material producers.

5.4 Conclusion

To wind up, let us briefly recap the major findings so far.

a. *Kokborok* and *English* belong to two totally different families of languages: *Sino-Tibetan* and *Indo-European* respectively. The KB students learning English find various problems in coping with the latter.

b. It is a truism in second language research that the first language grammar plays a significant role, mostly as a hindrance, in cases where the two systems i.e. the first language and second language, are radically at variance with each other.

c. Through this comparative study it has been established that KB is a HEAD LAST language while English is a HEAD FIRST language.

d. This parametric variation is largely responsible for the word order differences noted in the two languages.

e. The morphological property of VP determines the phenomena of Tense and AGR representation in both the languages.

f. In English AUX is mandatory in non-copular structure of such interrogatives. KB fulfils this demand of the interrogative formation by introducing a non-morphemic element de, in addition to rising tone.

g. The formation of the VPs gets complicated in accordance with the need to represent the complex concepts of the time continuum of the two languages.

h. Use of an additional verbal item renders the KB VP look like [(O) mV tV], where mV stands for main verb, and tV for the Tense Verb.

g. No verbal movement is necessary in KB, unlike English. Only de moves around the VP without affecting the semantic value of the sentence concerned.

****

Wh-questions in Kokborok

6.0 Introduction

At the end of the previous chapter i.e. in section (5.5) we have summarized the major characteristics of the *YN* questions in *KB* and compared them with the word order phenomenon in English. But for a comprehensive picture of the interrogative structures in *KB* one must also look at the other type question formation. In the present chapter therefore we look at the other major type of interrogative sentences namely *Wh*-questions in *KB* and compare them with those of English. In the process we expect to get some insights into the word order phenomenon in the two languages which promises to be extremely useful for the purpose of teaching English as a second language to the KB-speaking students of Tripura. To begin with we discuss the major characteristics of wh-word formation in English.

6.1 Wh-Questions in English

Wh- is the short form for what the traditional grammarians call interrogative pronouns i.e. who, when, which, where, what, and how. But even *Wh*-questions in English share certain properties with the YN ones. Let us therefore briefly remind ourselves some of the canonical properties of YN questions. YN questions are generally intended to elicit the reply *yes* or *no*. The word order in YN questions differs from that in declaratives. In declaratives the subject comes before the verb, but in YN question the auxiliary verb, (which normally functions as an operator) when the main verb is not carrying the AGR features like Person, Tense, Number and Gender etc., is placed before the subject.

65a.   John will marry Jill.
65b.   Will John marry Jill?

In (65a) the declarative sentence contains an auxiliary in the form of *will* which is placed after the subject NP *John* while in (65b) this order is reversed. This change is traditionally known as subject-operator inversion. Operator is generally the first or the only auxiliary. If the question does not have an auxiliary, nor is it a copular

44

construction with a be-type verb, *do* is inserted as a dummy auxiliary. For instance, the YN question in (66a) corresponds to the declarative in (66b).

66a. Marry likes John.

66b. Does Marry like John?

Does in (66b) has the appropriate inflection i.e. 3rd PERSON SINGULAR PRESENT TENSE which corresponds to the inflection of the verb *likes* in (66a). *Does* in (66b) ensures that the question begins with the sequence verb followed by subject.

[8]*Wh*-questions expects a reply that supplies the information that the *wh*-word indicates. They are called *wh*-questions since such interrogative sentences begin with a *wh*-word. '*how*' does not phonetically begin with *wh-* yet it is also included among the *wh*-questions. The *wh*-word may be a pronoun (67a-c), an adverb (68a-g), or a determiner (69a-b) that introduces noun phrase.

67a. *Who* is this man?

67b. *What* do you mean by this?

67c. *Whom* do you want to meet?

68a. *Why* is he here?

68b. *Where* did you stay last night?

68c. *When* will your brother arrive at the station?

68d. *How* did it all begin?

68e. *How* deep is the water here?

68f. *How* many people where there in the meeting?

68g. *How* much money do you need?

69a. *Which* song will you sing first?

69b. *Whose* house do you stay in?

In English, the *wh*-word is generally begins the question. However, if the *wh*-word or the phrase it is part of, is the complement of a preposition, in formal style the preposition moves the front together with the complement (cf. 70).

70a. I can go to any extent to help you.

70b. *To what extent* can I go to help you?

---

[8] For the discussion in this respect I have followed mainly Greenbaum (1996).

45

70c. *What extent can I go to to help you?

The two sentences in (70a) and (70b) correspond – the former being the declarative sentence and the latter being its comparable *wh*-interrogative. In the latter the *wh*-word *what* belongs to the prepositional phrase *to what extent* and hence when the interrogative form is being formed the *wh*-item needs to fronted; but being the complement of a preposition the entire prepositional phrase or PP is fronted. The grammaticality of such a movement operation is justified by the ungrammaticality of (70c) where the head of the PP *to* remains *in situ* i.e. in the position where it originates. All said, one must remember a caveat: in less formal style, the preposition can remain *in situ* with a pause in between the two prepositions *to* and *to* (cf. 71)

71. What extent can I go to, to help you?

We have noticed that subject-operator inversion takes place in YN questions. The same rule of inversion also applies to *wh*-questions. For example let us note the flowing sentence.

72a. What do you think?
72b. ?You think what?
72c You think something.

The declarative sentence in (72c) contains an object *something* to the transitive verb *think*. In (72b) we see the object which is being questioned by the speaker is replaced by the *wh*-word *what*. The grammaticality of (72b) though debatable does not concern us here as we are trying only to trace the route of transformation lying behind (72a). In (72a) grammaticality is ensured by two operations: a) the *wh*-word moves from its place deep inside the sentence to the beginning; b) a dummy operator *do* moves to the left of the subject *you* through subject-operator inversion.

An interesting thing happens when the *wh*-expression is the subject of the sentence. In that case there is apparently no movement of the *wh*-item. But this view of the traditional grammarians has been challenged by the generativists who argue that movement definitely

46

takes place: the *wh*-item moves further to the left but since the latter crosses no other item, the left-to-left movement remains invisible in the linear order of the constituents i.e. the normal declarative subject-verb order is retained (cf. 73).

73a.   A: Who is coming by the next flight?
73b.   B: The president [is coming by the next flight].

Speaker A asks the question with the intention to know the agent (subject) of the act of coming (73a). Speaker B answers (73b) by replacing the *wh*-word *who* with *the president* which is the subject of the declarative sentence corresponding to the interrogative form in (73a). However, in the informal style which is usually spoken, the normal subject-verb order is sometimes retained even when the *wh*-expression is not the subject as in (74-75).

74. You saw which movie?
75. You did what this morning?

This type of non-application of the rule of *wh*-movement to the beginning of the interrogative sentence is very intriguing for us especially when we notice that in KB and TB avoiding such movement i.e. retaining the *wh*-word *in situ* is the norm. We shall have more discussion about this *invisible movement* before long.

    The third important thing to note about *wh*-expressions in English is that a single interrogative sentence sometimes can contain more than one *wh*-item, if the question seeks to elicit more than one piece of information. For example, consider the following:
76. Who copies whom?

6.1.1 Wh-movement in English in generative syntax
In generative syntax particularly Chomsky (1981) onwards all English declarative sentences are assumed to be at the most a complementizer or Comp or C phrase or CP. This is because any declarative sentence in English can be made a subordinate clause by introducing a C like that, if, as, since, whether etc. etc. (cf. 77a-d)

77a. He is honest.

77b. I know that he is honest.

77c. John knows that I know that he is honest.

77d. Mary believes that John knows that I know that he is honest.

Another major premise of the Transformational Generative grammar or TG is that for all transformations the simple declarative form is the basic: transformation is effected by only one single rule Move α. Understandably, YN and *Wh*-questions also being derived in nature emerges through some item being moved from their place of origination in the underlying i.e. declarative form. The job of the grammar therefore is to explain where does the moved items go and land. We use the tool of phrase marker or tree diagram to show the origination, movement and landing site of the relevant items. We begin with subject-operator inversion involved in a YN question[9].

78. The boys are playing.

79.
The origination of the constituents of the sentence (78) are shown in the phrase marker in (79) where CP= COMP Phrase, C= COMP, IP = INFLEXION or INFL Phrase, I= INFL, I'= I single bar (i.e. the intermediate category between the zero category I and the maximal phrasal category IP, DP= Determiner Phrase, and V= Verb. To transform this simple declarative sentence into its corresponding YN question what is needed is to move the AUX or operator to the left of

---

[9] The analysis and discussion in this section is based on Radford et al (1999).

the Subject NP 'the boys' and the empty docking site to accommodate the moving item i.e. α is the head position of C. The arrow marked dotted line shows the movement route.

80.
This type of inversion operation involves movement of a word from the head position in one phrase into the head position in another phrase (in this case, from the head INFL position of IP into the head C position of CP). Hence such type of inversion movements is called head movement. What is interesting to note is that the moved item leaves behind a trace t of itself so that no other item can occupy this vacated place without violating the grammaticality of the construction. Hence the underlying picture of the sequence of words after movement looks like (81).

81. Are the boys t playing?

Let us now turn to *wh*-question type of transformations. So far it has been implicitly assumed the CP comprises a head C constituent and an IP complement. The C position is filled by a complementizer in some structures and by a preposed auxiliary in others. A vital question crops up at this point: where are the pre-auxiliaries like *wh*-items positioned in a structure like (80). One such structure is given in (82).

82. What games *can* you play?

In (82) the verb *play* is a transitive one hence must have an object. This intermediate form is as in (82a).

82a. *Can you play what games?

Reversing the process of auxiliary movement we get the form that approximates the original declarative form.

82b. ?You can play what games? ·

(82b) is·unacceptable because in a declarative sentence there can be no *wh*-item functioning as an interrogative marker. Replacing *what* with a non-*wh*-word like *some* gives us a completely grammatical structure of declarative type.

(82c) You can play some games.

Now tracing back the process we notice that the mapping from the declarative form in (82c) to the interrogative form in (82) involves two movements: a) the auxiliary movement and b) *wh*-movement, the latter being also known as operator movement. That the former is known operator movement has already taken note of earlier. We demonstrate the two movements in the following diagram in (83).

83.
What being a determiner of some kind *what games* is a DP. This DP which originates as a complement of the V in the VP deep inside the sentence, is obligatorily moved in the interrogative form of the sentence and the landing site of the DP in the Specifier or Spec position within the CP. This movement is called Operator Movement *wh-*word being an operator. In the other movement where the AUX *can* moves the Head position of IP i.e. I to the Head position of CP i.e. C is known as Head Movement.

A theory internal question arises at this point: how do we know that the *t* position of the moved item actually remains intact even after movement takes place. Two pieces of evidence are very common in the literature for justifying this theoretical stand. Let us look at the two following sentences:

84a. What game can you play *t*?

84b. *What game can you play cricket?

The first sentence is correct because the *t* position vacated by the DP 'what game' is not filled in subsequently by any item. In other words, the native speakers of English know that the t-position is there and should be kept intact. The second piece of evidence in support of *traces* is provided by the practice of *have* contraction in English. This is also known as have-cliticization. The form *have* of the perfect auxiliary has the clitic variant *'ve* and can cliticize to an immediately preceding word which ends in a vowel or diphthong. Significantly however cliticization is not possible in sentences such as (85).

85a. Which students would you *say have* won the match?

85b. *Which students would you say've won the match?

(85a) is acceptable as no cliticization takes place as opposed to (85b) where *have* cliticizes to *say*. This is because the DP *which students*

51

actually originates as the subject of the embedded clause in informal use as shown in (86).

86. ?You would say which students have won the match.

The DP phrase containing the *wh-item* cannot remain in-situ in an interrogative sentence and hence has to move out to the initial position leaving behind the trace t to look after its vacated position. The native speakers' knowledge of this underlying presence of *t* prevents the cliticization of have in (85b).

To sum up, we can say that in English there two types of interrogative constructions: YN and *Wh-* questions. In both the cases some items are moved to the sentence initial position. In the YN question it is the AUX or be verb with tense. In this case the movement employed is called Head Movement (cf. 79-80). In *Wh-*questions the AUX and *wh*-itme both are moved. While the AUX is moved to the Head position C of CP, the *wh*-item is moved to the Spec position of CP. Speaking differently, we can define a *wh*-question formally as that a clause is interpreted as a question in English if it has an interrogative specifier i.e a *wh*-item in the Spec position of CP.

6.1.2 Movement in double *wh*-constructions

As already noted earlier, in English a single interrogative sentence sometimes can contain more than one *wh*-item, if the question seeks to elicit more than one piece of information. For example, consider the following:

87. **Who** do you think will eat *what*?

A construction like this will render itself ungrammatical if both the *wh*-items are moved to the initial position of the sentence (cf. 88).

88. *What **who** do you think eat?

To find an answer to this let us begin with a phrase marker for (87) containing the relevant movements.

(89)
In (89) it is obvious that there is only one place D (i.e. Spec) position of CP into which a wh-item can be moved. The question remains why *who* has been selected over *what*? To answer this, the generativists have incorporated into their premise an economy principle stated in (90).

90. Economy Principle (EP)

Minimize grammatical structure and movement operations. (i.e. posit as little structures as possible, and move as few constituents as possible the shortest distance possible.) (Radford et al 1999: 330)

Understandably, (89) agrees with the EP which is ideal in any scientific research as it requires us to always seek the simplest and most elegant theory which is consistent with the data we need to explain. An English *wh-question* requires only one *wh*-item in the Spec position of CP.

Preposing two would be superfluous and contrary to EP. Again moving *what* to the said Spec position will involve a longer journey for *what* compared to the one needed for *who*. Thus we can account for why it is *who* and not *what* that moves to the Spec-CP position in (89).

6.2 Wh-questions in Kokborok

The picture of *wh*-question formation in KB is certainly not so complicated. But it has its own characteristic features. As a point of departure let us have a look at the relevant KB data. There are at least ten *wh*-interrogatives in KB. They are divided into three groups: a) interrogative pronouns, b) interrogative adverbs and c) interrogative determiners. Although it sometimes becomes impossible to find an exact replica of this classification for English *wh*-words in KB, because of certain cases of overlapping, we have tried to follow the classification as much as possible. In course of ours survey certain interesting differences emerge not only in word order but also in the complement structures of certain categories. We shall point out these at appropriate junctures.

6.2.1 Wh-questions with interrogative pronouns: *sabo, tamo, sabono*

6.2.1.1 Sabo 'who'

In Kokborok the *wh*-word can remain in situ or its place of origination. This is unlike English where the *wh*-word obligatorily moves to the initial position of the sentence. Another interesting feature of KB syntax of both wh-words and declarative sentences is that in the third person singular/plural in present tense the be-verb can be dropped. This phenomenon of phonetically unrealized be-verb in KB is also shared by TB and SCB. For example, consider the following:

98a. KB Interrogative

nini   kami   boro ?
your   village   where
'Where is your village?'

98b. Declarative

ani   kami   oro
my   village   here
'My village is here.'

99a. TB Interrogative

tomar   gram   koi ?
your   village   where
'Where is your village?'

99b. TB Declarative

amar	gram	eikhane
my	village	here

'My house is here.'

100a. SCB Interrogative

tomar	gram	kothay
your	village	where

'Where is your village?'

100b. Declarative

amar	gram	ekhane
my	house	here

'My house is here.'

When it is mandatory for the English version of these sentences to have an overt be-verb 'is' in the three others i.e. KB, TB and SCB, the be-verb can remain covert. That the verb form is underlyingly there in such copular constructions can be proved by the surfacing of the be-verb form in other tense forms. (cf. 101).

101a. KB:　　Ani para oro *tongmani*

101b. TB:　　amar bari eikhane *asilo*

101c. SCB:　　amar baDi ekhane *chilo*

For all these sentences in (101) the English version is 'My village was here.'

6.2.1.2 Tamo 'what'

NP	tV		NP	mV
O	AUX		S	V

In English the presence of an AUX+T is obligatory in most of the wh-constructions except when information is sought about the subject of the sentence. The AUX in English when present bears the Agreement or AGR features while the main verb either appears in bare form or participial form: *will go*, *have gone* or *is going* etc. In KB a similar phenomenon is observed not only in interrogative but also in declarative sentences. This is noted in particular in progressive tense constructions. To be specific, the verbal form is split up between mV+PROG and an existential verb which bears AGR feature which we designate as tV or verb with tense. The existential verb lends a sense of continuousness to the expression. In (103) above we notice an illustration of this in *khlai-wi tong* translated as *do-PROG exist V* meaning 'are/is doing'. One feels tempted to invite a comparison with Bangla compound verbs live *kaj korche* " 'work doing' = doing. But the latter is obviously not a case of split up VP. The KB phenomenon resembles the English type AUX+T mV construction. Notice in KB also the main verb takes the participial

suffix *–wi* equivalent to English *–ing*. More research is needed in the morphological, syntactic and semantic aspects of such constructions.

104. KB: S O WH[O] V AUX

The SOV structure of KB simple declaratives sentences obtains even in *wh*-constructions. The only difference is that the *wh*-word can take appropriate morphemes to signify is case feature. So, *sabo-no* = who to = 'whom' i.e. who-AC[cusative]. That movement of wh-items is redundant in KB, is perhaps because KB is still predominantly a synthetic language where post positions are yet to take over en mass the role of syntactic relations between words. Case markers (read suffixes) signify the inflections. The following summary in abstract forms of functional categories substantiates our observations.

109a. KB-I

109b. KB-D

Though not directly related to our purpose of the comparative study of the syntax of wh-interrogatives in KB and English, it would not be out of place here a note morphological practice in KB. In this language a very productive process of morphemic reduction takes place by subtracting the latter part of the first NP and the first part of the second NP in an other wise genitive phrase of type NP's NP. So *nini bwsa* ∀ *nwsa* 'your children', *ani pha* ∀ *apha* 'my father'. Similarly *tangwi* originates from *tamo-ni bagwi* [what-GEN for] ∀ *tangwi*. Synchronically sometimes both the contracted and non-contracted forms are used as free variations.

WH[ADV]	V	NP	
WH[ADV]	V	S	

In Kokborok lexicon for various referents there are designated morphemes –either a word or a clitic – which are mandatorily used. In (135) *khorok* in *bwsa khorok* is one such example which indicates an item with the feature [+HUMAN]. The Bangla item *jon* which is always used in constructions referring to human beings like *koto jon* 'how many people', *onek jon* 'many people', *ek jon* 'one person' etc. presents an analogous morpho-syntactic formation.

---

[15] It is very difficult to ascertain the exact grammatical category of *bwswk* in KB. The word is translated by many scholars as 'how many' or 'how much'. Going by the English form the word how many is a combination of an ADV+ADJ forming an ADVP (English being a head –first language). KB word bwswk is constituted of one word and behaves more like an Adjective than an Adverb. More over the literal translation of the sentence like *Nini bwsa khorok bwswk?* 'Your children (are) how many ' indicates the structure being a copular one where the post/ preverbal adjectival phrase is interpreted as Predicative. For this reasons while in interrogative sentence we interpret as a WH[ADV] and in declarative structure its corresponding non-interrogative items are treated as P[redicative].

6.3 Conclusions

In this final chapter we have extended our investigation of the syntax of interrogatives in Kokborok and English to wh-questions. This has given us in the main a comprehensive picture of the word order differences in the two languages. In the previous chapter we have noted the major differences in respect of YN questions and their implications for English language pedagogy in Tripura particularly concerning a more effective teaching of English to the KB speaking

students at various levels. To recap the main points we reproduce the major points here.

152.

a. Kokborok and English belong to two totally different families of languages: Sino-Tibetan and Indo-European respectively. The KB students learning English find various problems in coping with the latter.

b. It is a truism in second language research that the first language grammar plays a significant role, mostly as a hindrance, in cases where the two systems i.e. the first language and second language, are radically at variance with each other.

c. Through this comparative study it has been established that KB is a HEAD LAST language while English is a HEAD FIRST language.

d. This parametric variation is largely responsible for the word order differences noted in the two languages.

e. The morphological property of VP determines the phenomena of Tense and AGR representation in both the languages.

f. In English AUX is mandatory in non-copular structure of such interrogatives. KB fulfils this demand of the interrogative formation by introducing a non-morphemic element *de*, in addition to rising tone in YN type questions.

g. The formation of the VPs gets complicated in accordance with the need to represent the complex concepts of the time continuum of the two languages.

h. Use of an additional verbal item renders the KB VP look like [(O) mV tV], where mV stands for main verb, and tV for the Tensed Verb.

g. No verbal movement is necessary in KB, unlike English. Only *de* moves around the VP without affecting the semantic value of the sentence concerned.

There is no use of de in wh-questions in KB. the rising tone however continues to play its role as an accompaniment of interrogative constructions. The major aspect of interest in wh-questions is the

involvement of no movement of any item in Kokborok compared to English. The wh-item remains in situ and the over all word order sequence is the same as in declarative sentences. Mandatory absence of be-verb in the present tense in copular constructions is another significant aspect of distinctions between Kokborok and English interrogatives and declaratives. We have given sufficient number example sentences and pointed out the relevant issues for theory and language teaching. The entire picture of differences between Kokborok and English in respect of their respective interrogative formations and also in respect of formation of declaratives in given in the table in (153). The picture in almost a complete one with the facts ranging over ten wh-items. Keeping the points of differences mentioned in the table will definitely help everybody concerned to approach the issue English language teaching to the Kokborok speaking students of Tripura in a more systematic, scientific and fruitful manner. This is because the teacher can now trace the systematicity of the errors committed by the learners and will be able to explain the mistakes in terms of the word order disparity between the two systems.

EPILOGUE

Dialect areas of Kokborok in Tripura

Kokborok has eight dialects namely Puran/Kwcham Tripuri, Reang, Jamatia, Noatia, Murasing, Uchoi, Koloi and Rupini. They are spread all over the state of Tripura. In this section we give a brief account of their ethnic distribution in various geographical locations of Tripura.

1. Kwcham Tripuri :

The speakers of this dialect live both in hills and plain lands. During the early reign of Maharaja Birendra Kishore Manikya Bahadur Tripura, all people of Tripuri community used to use the surname Tripuri. But later on some of them started to use Debbarma, during the reign of Maharaja Bir Bikram Manikya Bahadur Debbarma. This dominant dialect, which in fact represents the language Kokborok itself, is spoken by the members of the Tripura Royal Family and their close relatives living in Agartala, the capital of Tripura. Some people of this community, living in rural areas still continue to use the surname Tripura. According to the census report of 2001, the total number of population belonging to this community is 5, 43,848, This dialect covers areas of Sadar Sub-Divisions (both North and South) of the West Tripura District. Some of this community also live in Khowai, Kamalpur, Kailasahar, Dharmanagar and Longtarai valley Sub-divisions.

2. Reang :

This dialect area covers areas of both South and North Tripura Districts. In the South the remarkable areas inhabited by the Reangs include Kasima, Kurma, Chelagang, Durgarampara, Satyarampara and Karbook etc. In the North the Reang speaking people live in the Sub-divisions of Kailasahar, Dharmanagar, Kanchanpur and the Jumpui Hills. This is the second major dialect of Kokbarak spoken by about 165103 (qua Census 2001).

3. Jamatia :

This dialect speaking people live in various areas of the Sub-Divisions of Udaipur, Amarpur and Gandachera. They number about 74949 (qua ibid).

4. Noatia / Kwtal :

This dialect is spoken in the areas spread over the Sub-divisions of Sonamura, Belonia, Santirbazar and Sabroom. Noatias number about 6655 (qua ibid).

5. Murasing :

People of this dialect numbering about 2,500 (as per ibid), live in the areas of Belonia, Santirbazar and Udaipur sub-divisions.

6. Koloi :

Their total population is approximately 3500 and they originally belong to the Halam community, the other being the Rupini, who speak KB. Kolois live in areas belonging to the Sub-divisions of Teliamura, Amarpur, and Longtarai Valley.

7. Uchoi :

This is for some scholars the smallest dialect of KB with the total population being about 2103 and the people speaking this dialect live in areas of the Sub-divisions of Amarpur and Kanchanpur.

8. Rupini :

This dialect is spoken in areas of Jirania Block of the Sadar Sub-division, and in areas of Telaimura, Dharmanagar, Kumarghat and Longtarai Valley Sub-divisions. The speakers of this dialect number about 2000.
