### PREFACE

As per the instructions from the Government in Tribal Development Department, Government of Maharashtra. Mantralaya Annexe, Bombay, the work of preparing a model report on Integrated Tribal Development Project, Kinwat, in District Nanded was entrusted to the Tribal Research & Training Institute, Maharashtra State, Pune. The model report as conceived on the broad guide-lines from Central Government involved the study of assessing the present economic land scape of the area, status of prominent tribal communities found in the area, flow of financial resources to the I.T.D.P. area together with socio-economic problems and potentials of development in the project area and second--ly evolving integrated approach for all-round development of the project area. With this object in view, discussion with the Govt. officials of Integrated Tribal Development Projects were held and with their cooperation we could collect some material.

out by personal visits to various Govt. officers in the area. Similarly, the data already collected through Universal Bench Mark Survey (1980) was also made use of. The model project report not only covered the aspect of analysing the data as made available through the VIIth Five Year Plan document for the I.T.D.P. but also visualised the pattern and allocation of funds to various sectors under the prospective VIIIth Five Year Phan. Thus, the sectoral allocation of funds has been modelled on the basis of

...P.T.O.

earlier experience of a Five Year Plan and requirement of the Integrated Tribal Development Project. Kinwati

This work of compilation and drafting of the report was entrusted to Shri S.R.Shevkari, Research Assistant who worked under the supervision of Shri M.B.Surana, Deputy Director and my guidance.

We hope that this model report would be useful to the administrative officers, planners interested in tribal development.

> (Dr.G.M. GARE) Director, Tribal Research & Training Institute, Maharashtra State, Pune.

#### CHAPTER I

Conceptional Background of Tribal Sub-Plan Strategy.

### Introduction:

implemented under the Five Year Plans hitherto has guided us to recognise the fact that the total develop—mental efforts in the tribal areas need dual approach i.e. massive investment and the integrated approach towards the problems faced. It was thus felt that the development strategy in the areas of tribal concen—tration had to be in the nature of area development wherein infrastructure — physical, legal and institu—tional would be emphasised. Further it would be required to combine with the programmes directed to the specific target groups.

It was, therefore, envisaged that in the areas of tribal concentration, socio-economic situation necessi-tated protective development measures so that process of development did not itself result in increasing exploitation as would be the case in the absence of deliberate and conscious intervention by the Government.

1.2 The strategy for the development of the areas largely or predominently inhabited by the tribals was evolved on the eve of the Vth Five Year Plan. It aimed at development of tribal areas with the focus on development of tribal communities, and primitive

tribal groups with special priority. Hence the areas with 50% or more tribal concentration were carved out and treat—ed as "Predominently Tribal Areas." A tribal block was taken as the smallest unit for inclusion in the tribal sub-plan. A block or a group of blocks called Integrated Tribal Development Project generally comprised of tahsils was taken as a basic unit for planning and develop—ment in the Tribal Sub Plan Area.

1.3 Within the Tribal Sub Plan Areas, the basic unit of planning and implementation is now the I.T.D.P.(Integrated and Tribal Development Project). This is expected to be homogenous and viable unit of administration distinguished by the resource base of the area which will again focus in the special needs of the inhabitants. The Tribal Sub Plan was an aggregate of the plan made for Integrated Tribal Development Projects incorporating the principles of planning from below.

Through the strategy of Tribal Sub Plan it was sought to earmark the funds from the general State Plan in proportion to the tribal population in the State. A provision was made for the Special Central Assistance to to act as an additive and catalyst for spurring financial investment by the State Govt. and other financial institutions besides the contribution from the Central Ministries.

The working group set up by the Planning Commission, Government of India on the Tribal Development during the Sixth Plan laid down the main objectives

of the tribal development as raising productivity level in the fields of Agriculture, Horticulture and Animal Husbandry, Forestry, Village and Small Industries etc. It was expected to help to create economic impact of an order which would enable the targetted families in the sub-plan area to cross the poverty line and become self-sufficient. Education was to be treated as key priority sector in the Sixth Plan period.

1.5 Besides, elimination of exploitation of tribals in the fields of land elienation, the problems of money lending, debt-bondage, trade, excise/forest etc. were of a vital significance. The Point No. 7 of the New-20 Point Programme followed for accelerating the space of development of Scheduled Tribes also re-inforced these objectives. In short, the impetus to planning from below in tribal areas was given in the Sixth Plan period.

### VII Five Year Plan strategy - appraisal.

1.6 Food, employment and productivity were the main objectives of the VIIth Five Year Plan. In the field of tribal development, raising the socio-economic condition of the tribal people and strengthening of infrastructure of tribal area remain the proximate objectives. In the Seventh Plan approach document, a mix of beneficiary oriented, infrastructure and human resource development programmes are considered to be essential elements for planning for tribal development.

While determining the sectoral outlays, care has been taken to ensure that a proper balance is maintained between core sectors, viz. agriculture, minor irrigation, social and community services including supply of drinking water, public health etc. Adequate provision has been made for Tribal Areas Sub Plan for Scheduled Tribes.

### Salient feat res of the Tribal Sub-Plan in the State.

- 1.7 The following salient features of the Tribal Area Sub Plan of the State can be summarised under new strategy.
  - i) The provision made under the sub plan cannot be diverted to programmes outside the Tribal Area Sub Plan.
  - ii) Separate minor heads have been opened for accounting the expenditure on the Tribal area sub-plan programmes.
  - iii) The Tribal Area Sub-Plan is based on the Integrated Area Development Approach with focus on the development of tribals in pursu--ance of the guidelines issued by the Govt. of India as well as on the decisions taken by the State Govt. and on the experience gained in the past.
- 1.8 Guidelines for preparation of project reportThree ingredients must find place in the prepara-tion of the project report on the Integrated Tribal Develop-ment Projects.

A LOS DESCRIPTIONS OF STREET

..5/-

They are as follows :-

- 1) The natural resource endowments of the project area.
- 2) The socio-economic matrix i.e. occupations, skills and aptitudes of the people.
- 3) Financial resource availability for the Five Year period and each of the five annual phases of the plan.

In pursuance of the guiding principles and the background information enunciated as above, an attempt has been made to draft a model project report of the Integrated Tribal Development Project of Kinwat from Nanded district in the State.

#### CHAPTER - II

Profile of Integrated Tribal Development Project: Kinwat.

2.1 The tribal population in Nanded district is concentrated in Kinwat tahsil. It comprises of 244 villages and one town. The area of these villages largely covered under the Tribal Area Sub Plan. Therefore this block is taken up for preparing its model Integrated Tribal Development Project plan.

Kinwat tahsil is located in the north-eastern part of Nanded district. It is bounded on the East and South by Andhra Pradesh and on the West and North by Yavatmal district of the State. This tahsil forms a compact zone and lies between 190- 25" to 190-55" North latitude and 77°- 5" to 78°-19" East longitude. Kinwat tahsil covers a geographical area of 209724 hectares with the total number of 244 villages. Out of 244 villages 231 are inhabited and 13 villages are deserted or uninhabited. The project area, however, spreads over 185 villages out of which 175 villages are inhabited and 10 villages are deserted or uninhabited. These villages in the project area cover the total population of 1,34,919 sculs. The tribal population stands at 41,139. In the tahsil 59 villages fall outside the tribal sub plan area. Their total population works out to 47,604 together with the tribal population of 8599. Besides these villages in Tahsil. Kinwat town

is also included in the tribal sub plan area. It covers a geographical area of 1,374 hectares. The total population stands at 16,476 including tribal population of 865 only. The Tribal Sub Plan Area of Kinwat tahsil is now rationalised with Scheduled Area. A map of Kinwat tahsil depicting the boundaries of Tribal Sub Plan areas is enclosed (Appendix (a)).

The statistical information placed below brings out the picture of the Kinwat Tahsil based on 1981 census.

Table No. 2.1

Comparative distribution of total and tribal villages and population according to 1981 census in Kinwat tahsil and Kinwat I.T.D.Project.

b) Population	16,476	16,476	
c) Tribal population (Urban)	865	865	

Source: District Census Handbook Part XIII A-K-B for Nanded District.

Further, it will be worth studying the inhabit-ed villages in Kinwat tahsil as classified according to
size range of population as per 1981 census. The table
below presents the distribution of inhabited villages
in size class of population.

### Table No. 2.2

Distribution of villages by size-class of population as per 1981 census

No. of	No. of villa- -ges	cent-	• popula-	Pei cei -a	at-
1. Less than 200. 2. 200 - 499 3. 500 - 999 4. 1000 - 1999 5. 2000-4999 6. 5000 end above	16 73 81 51 10 Nil	7 32 35 22 4	1858 25,802 57,823 68,133 28,907	1 14 32 37 16	
Total	231	10 <b>0</b>	1,82,523	100	

Source : District census Handbook Part-XIII Nanded Disti.

2.5 The data highlights that about 89 (39%) villages fall in the size class of population upto 499; 81 (35%) villages are categorised in the population group of 500-999. This distribution indicates that median and mode values of distribution fall in

the population range of 500-999. The analysis of data therefore leads to conclude that the project area is characterised by the villages with small and medium size of population.

2.6 The Scheduled Tribe population in the district and the tahsil over a decade have indicated sharp changes. The following table will highlight the situation precisely.

### Table No. 2.3 - :

Comparative district/tahsil Scheduled Tribes population over a decade (i.e. 1971 - 1981)

District/Tahsil	Percentage :	of S.T. population
	1971	1981
Nanded district	4.03	. 10.19
Kinwat tahsil	20.79	25.43

Tribes in the district as in other parts of the State is primarily the result of "the removal of area restriction in 1976". It is also revealed in the study that certain communities like "Mannerwar, Munurkapu, Munnurwad, Telugu Munnrwar and Kolis" pose themselves as belonging to Scheduled Tribes and accordingly enumerated themselves under the category of Scheduled Tribes at the time of census enumeration 1981, merely on the basis of similarity in nomenclature. Because of these reasons, there is a sharp rise in Scheduled Tribes population.

....10/--

### Profile of distinct tribal groups

- 2.8 The brief description of the prominent tribal groups in the project area is presented below. The predominent tribal groups witnessed in the project area are "Gond, Andh, Pardhan, Kolam and Bhil communi--ties. The seriatum description of each tribal group runs as follows.
- 2.9 Gond: This tribe is the third largest tribal group in the Maharashtra State. The main concentration of the tribe is in the districts of Chandrapur, Gadchiroli. Yawatmal, Bhandara and Nanded. The Gonds constitute the largest tribal group in the project area of Kinwat Integrat--ed Tribal Development Project. Gonds are divided into more than 50 sub groups in the Maharashtra State according to the Scheduled Castes and Scheduled Tribes Orders (Amendment) Act, 1976. In Kinwat tahsil we come across the following major exogamous groups:
- 1) Raj Gond
- 2) Arakh
- 3) Modia 4) Bhatola

- 5) Dhurma
- 6) Dholia
- 7) Dorla 💮 8) Gaiki

- 9) Gaita
- 10) Koya
- 11) Muria

There are 3088 Gond households with 16462 population in the project area as revealed from the Universal Bench Mark Survey (1980).

Andh: This tribal group constitutes the principal tribe in the State of Maharashtra. This is the second largest tribe in the project area. population as enumerated through Bench Mark Survey

...11/-

works out to 12,186. Their concentration is mainly found in Parbhani/Nanded and Yawatmal districts of the State. The Andhs appear to be very remarkable people with dark complexion, thick lips and prominent cheekbones, They show marked aboriginal features. They are greatly influenced by the Telugu people who come from the adjacent area of Andhra Pradesh. The Andhas appear to be a non Aryan tribe of Andhra Pradesh from which they derive their names.

This tribe is divided into two groups viz.

Vartali (or pure) and Khaltali (or illegitimate). They have large number of exagamous sects, most of which appear to have adopted Maratha names, either taken from villages, animals or plants.

Andh is a cultivating and a hunting tribe, confined to the hilly tracts. They catch antelope, hares, pigs and some other animals in their nets. In Kinwat tahsil, they are mostly cultivators.

### 2.11 Pardhans

The Pardhans are one of the prominent tribes in Maharashtra. They are generally located in Yawatmal/Chandrapur/Nanded districts and few of them are scattered in Aurangabad district.

The name Pardhan is of Sanskrit origin and signifies minister or agent. There is a tradition that the Gond kings employed Pardhans as their ministers. Hence this Scheduled Tribe is described as the priest

... 17/-

of the Gond. Pardhans are usually short and built. The family of Pardhan is patrilocal.

This tribe has several endogamous divisions of which the principal area the Raj-Pardhans, the Gond Pardhans, Thotia Pardhans. In the project area of Kinwat tahsil, Pardhan practices agriculture as their vocation for their livelihood. There are 459 households with 2722 population as revealed from the Universal Bench Mark Survey (1980).

2.12 <u>Kolam</u>: The Kolams are declared as Scheduled Tribes in Maharashtra. They are Dravidian in origin and mainly found in Gondwan region. The main concentration pockets of these tribes are found in the districts of Nanded/Chandrapur/Yavatmal as per 1971 census.

Moreover, they are mainly concentrated im Kinwat taluka of Nanded district Wani and Kelapur talukas of Yawatmal districts.

In their own dialect, they call themselves as 'Kolavar' but in Gondi language they are called as "Punjari or Bhumka". In telegu they are known as Mannervarlu In Marathi they are known as 'Kolams'. They have their own language as 'Kolami'. It is one of the primitive tribes in the State. This tribal group is engaged in agricultural pursuits. The Universal Bench Mark Survey 1980 projected 2457 population of this tribe in the project area of Kinwat.

The Kolam tribe has no sub tribe or sub divisions but like Gonds they are organised into

exogamous clans and most of them have the names identical with those of Gond clans. The marriage ceremonies, deities etc. are all identical to those of Gonds. The exagamous divisions have been divided into four Gods, Five Deve, Six Deve, Seven Deve etc. worshipping Gods respectively. Enquiries revealed that the Kolams are not a sub tribe of the Gonds. Their language is altogether different.

2.13 Bhil: The Bhils are one of the most prominent tribe in Maharashtra both in number and historical importance. They are found mostly in the districts of Sahyadri region. But a very few families are also located in the project area of Kinwat wherein their population as revealed from the Universal Bench Mark Survey (1980) stood at 810.

Bhils generally earn their livelihood by collection and sale of minor forest products. They are mostly peasants or labourers. Some Bhil families have found their vocation in the tertiary sector (service/business sector) such as railways, post and telegraph, forest guards, Teachers etc. In short, the Bhils are economically a group of settled agriculturists, socially a patrilineal tribe and traditionally a community of good archers.

The Bhils believe in totemism. They have their own dialect known as Bhili or Bhilori which contains a number of non Aryan words and is much influenced by Marathi, Gujarathi and Marwari dialects.

....14/-

The great majority of them have retained their aboriginal dialect particularly in Dhule and Jalgaon districts.

2.14 The study of households and population of the predominent tribal groups in the project area on the basis of data collected through the Universal Bench Mark Survey 1980 will certainly highlight family structure of an household together with population of each tribal community.

### Table No. 2.4

Households and population of predominent tribal group with family size.

Sr. No.		ent i	No. of househo	olds.	Populáti		Averag	of
1:.	2.		3.		4.		the ha	ouse-
1.	, Gond		3088		16482		5.5	
2.	Andh		2226		12186	, ·	5.5	•
3.	Pardhan		459		2722		6	r 5
4.	Kolam		436		2457		5	: 6
5.	Bhil		167		. 810		5	
		<b></b>					1.0	

The picture of the composition of household of each predominent group indicates that the average size of a Gond/Andh/Kolam/Bhil family is between 5 to 6 members.

2.15 The occupational classification of tribal household has an economic significance. The statistical

-75/-

information presented in the table below spells out the important indications of both the district and the tahsil under review.

Source : District Census Handbook, District : Nanded.

It is observed that the total main workers amongst Scheduled Tribe in the tahsil accounts for about 30 percent. As much as 25 percent Scheduled Tribe

workers are categorised as "Cultivators" and about 40 percent are agricultural labours. The Scheduled Tribe Workers that are engaged in household industries, manufacturing processing, servicing and repairs accounts for 42 percent of the district's total Scheduled Tribe population. The Scheduled Tribe marginal workers in the tahsil (Kirwat) accounted for about 18 percent.

It is true that the agriculture is the main stay of the majority of the population in the project area. It, therefore, presents a lopsided distribution of economic activity in the area which calls for the definite solution of the magnitudal problem of farm communities.

2.16 The occupational pattern of Scheduled Tribe population in Kinwat tahsil according to 1981 Census will indicate the actual number of personnel under each cate—gory together with its percentage. The table No. 2.6 indicates the occupational pattern as observed in the tahsil of Kinwat.

# Table No. 2.6

Occupational Pattern of Scheduled Tribes population in Kinwat Tahsil (According to 1981 Census)

Sr No	•	Item			Number	Percenta	ge
1.	Total	population main worker	(Scheduled	<b></b>		100 51	
		marginal wo			2723 22214	5 44	

Item	Number	Percentage
Break-up of workers and percentage to vorking population.		*******

#### CHAPTER\_III

# Economic Landscape of the Project Area

Agriculture is the principal activity of the tribal and non-tribal people in the Integrated Tribal Development Project, Kinwat. It is the main stay of their livelihood. The land use pattern in the Kinwat Tahsil is presented in Table No. 3.1 given below:-

### Table No. 3.1

(Source :- Dist	t. Stat.	Abstrac	t, Nanc	led, 1984-	 -85)	* * * * * * * *

The data presented in the table indicates that the forest area over the period under review remained steady (unchanged). Similarly, the uncultivable land also found to be unalterable but the fallow land in the year 1984-85 has substantially decreased compared to the earlier two years. The total cropped area showed increasing trend in the year 1984-85 as compared to the earlier years. However, there are no spectacular changes in the land use pattern are visualised.

The project area of Kinwat falls under the moderate to moderately high rain fall zone, ranging from 900 to 1250 mm. Since the cropping pattern is generally dependent on the factors such as soil texture, irrigation facilities available, rainfall and the climate in the area, the principal crops are Jawar (Kharif) and Rice amongst the cereals while Tur, Urid and Moog are amongst pulses and Cotton and Groundnut are in oilseeds. The other important crops grown in the area are Chilly and Til.

The Table below gives the important crops grown together with the area covered thereunder during the three consequentive years.

...20/--

year 1982-83 to 1984-85.

Table No. 3.2 shows that the area under Jowar (Kharif) and Rice in the year 1984-85 has slightly increased. The area under groundnut and chilly has also increased to some extent. The area under Cotton in the 1984-85 has shown a slight decline over the earlier year.

The table further shows that in the year 1984-85 cotton occupies about 48% of the total cropped area in the tahsil. The Jowar (Kharif) accounts for about 31% of the cropped area while rice and pulses (Tur) account for about 6% area each in the same year.

A general view on the cropping pattern can be the expressed that preference for the cash crops is being increased among the tribals. This is rather unique trend because the tribals generally do not go in for cash crops, because of their traditional outlook towards farming activities and their poor economic conditions.

### Sources of Irrigation .

3.4 The water is one of the important resources for increasing production through irrigation. It exercises more influence on the change in the cropping pattern in the area. The major sources of irrigation can be studied with the help of following information.

...21/-

# Sources of Irrigation in Kinwat Tabsil

			(Prov	isional)	1984-85	
Sr No:	Year	Total No. of Wells.	Irrigation wells in fitted w	use	Irriga- tion wells not in use.	Success- ful Bore Wells.
			Electric Pumps	Diesel Pumps

Şo	ource :- Dist	rict Stati	stical Abs	tract 198	82 <b>-83</b> to 19	98485.

It is seen from the above table that only 27% wells are in use for irrigation purposes. In order to boost up the irrigation facilities and programme some small and medium irrigation projects have been completed in the area.

#### Land size

3.5 The economic status of a family is certainly influenced by the land possessed by the household. The classification of the households by size-class of land possessed is presented in the table below which is based on the data collected through the universal Bench Mark Survey (Household) 1980.

TABLE NO. 3.5

Distribution of households by size-class of land possessed

Sr. Size-class No. of land (in Hec- tares).	No. of House- -holds	poss- -ess- -ed.	%age to total land poss- -essed	Percentage to total Esuseholds (tribals)
1. 2.	3.	49(	5.	6.
1. Landless	3214	( <u>2</u> )		46.0
2. Below 1.0	90	62		1.0
3. 1.01 to 2.00	493	672		7.0
4. 2.01 to 5.00	2117	6247	37.60	30.0
5. 5.01 to 6.00	213	1122		3.0

	7012	16613		100.0

Source: Universal Bench Mark Survey (1980)

. . 23/-

It is seen from Table No. 3.5 that about 46% families are landless. The families of small and marginal holders having upto 2.0 hectars of land account for about 8 percent while the households with landholdings between 2.01 to 5.0 hectares form 30 percent of the total tribal households in the project area. The families having fairly large holding i.e. above 10 hectares are only 4%. The land possessed by the various size groups shows that 9% families possess 26% of land and 4% families possess 25% of the total land in the large holding group, whereas 41% of the families in smaller holding group possess about 41% of the total land.

The landless and the marginal groups accounts for about 54% in the areas. That leads to the poor economic conditions of the majority of the tribal families in Kinwat Tahsil.

3.6 The economic status of the household is commonly judged on the basis of income it accrued. The data on the classification of tribal households according to the income size (collected through the universal Bench Mark Survey(1980) is presented in the following table.

TABLE No. 3.6

Sr.	Income Range (Rs.)	No. of house- -holds.	Percentage of Households to the total households.
1. 2. 3. 4. 56.	0000 to 3600 3601 to 4200 4201 to 4700 4701 to 5400 5401 to 6000 6001 to above	6330 210 42 144 90 205	90.0 3.0 0.5 2.0 1.5 3.0
	Total	7012	100.0

The above table brings out that about 90 percent of the households fall in the income-range of Rs.3600 and below which is considered for classifying the households falling below the poverty line (B.P.L.) In other words it can be said that the majority of the tribal households are living below the poverty line in Kinwat Tahsil. The percentage of the households enjoying higher income is very small.

3.7 The inter-tribal insufficiency of income is also worth studying from the point of view of insufficiency of income and their tendency of migration for earning their livelihood. Table No. 3.7 (Universal Bench Mark Survey 1980) brings out the distribution of households by tribe with insufficiency of income and their migration to the places.

TABLE NO. 3.7

Distribution of families with insufficiency of income and migration by tribal

	• • • • • • • • • • • • • •					

Source: Universal Bench Mark Survey 1980.

The information provided in the table above, indicate that as much as 75 percent of the tribal house.—holds belonging to Pardhan and Kolam tribes migrate to other areas for consolidating their economic conditions. Next to them the Gond fribal families migrate for their livelihood. As these families have insufficient income and are categorised as "below poverty line "families they are bound to go in search of some means of liveli—hood. The insufficiency of income and the migration are thus co-related. The economic status of the tribal families in the project area of Kinwat is very poor and as much as 90 percent of the families do have the income less than Rs. 3,600/—.

The aconomic backwardness of the area and the people in general and the tribal families in particular calls for devising various schemes for the economic upliftment of the people. The general over-view of the land utilisation in relation to the cropping pattern and the economic status of the families in the area call for massive multi-pronged programme for further development in the Integrated Tribal Development Project Area.

### CHAPTER - IV

# Special Areas of Development in the Project

Tribal Development Projects have achieved good results but it is still necessary to identify some major thrust areas for development Programmes.—The thrust areas in Kinwat Integrated Tribal Development Project consist of agriculture, animal husbandry, Horticulture and pasture development and forestry development. The key-programmes in such thrust areas may substantially support and gear up the economic development of the region.

# 4.2 Agro-based industries

The agriculture being the main stay of the tribal people in the project area, the non-existance of agro-based industries which would have been flourished rapidly is conspicuously felt, Agriculture, besides, the potent source of raw material for agro-based industries has a vast potential for employment generation in the rural industries. It is a foster mother of all rural industries concerning the development of area and the people.

## 4.3 Agricultural farms

The agricultural farms at present tend to represent an isolated activity. Their role in development of agriculture production is required to be re-defined. The proper linkage have to be made in terms of supply of seeds,

....27/-

providing a demonstration base and involvement of people in the specific extension activities around the farm itself. The network of such agricultural farms in the Integrated Tribal Development Project must be worked out. This will cater to the specific requirements of each agricultural region.

## 4.4 Dry Farming Technique.

The level of irrigation is low in the area so a clear programmes of dry-farming techniques call for consideration. The tribal farms are mostly small and marginal. The cultivators with their uneconomic holdings and consequent upon accrual of low income, they find difficult to meet both ends. In order to find out proper solution to the problem the thrust areas must comprise of agriculture, animal husbandry and co-operation.

The tribal farmers are unaware of farm techni-ques. The lack of adequate knowledge about farm techno-logy contributes to technological gap in tribal farmers
as compared to the non-tribal farmers in Kinwat tahsil.

# 4.5 Horticulture Programmes

It is because of the favourable agro-climate conditions horticulture has emerged as one of the major programmes in most of the tribal areas. In the Integra-ted Tribal Development Project , Kinwat, the horticul-ture programme must get a phillip for rapid develop-ment of agriculturists.

••••28/**-**

#### 4.6 Special Livestock Development

Due to the larger number of livestock population the programmes for the development of goatry, sheep breeding need to be worked out for the entire Integrated Tribal Development Project. Good potential areas have not so far outlined under special livestock development activities.

Areas of pasture potential in the Integrated Tribal Development Project need to be delineated and specific animal husbandry programmes to be drawn up for intensive development under integrated approach. Fodder development for larger livestock population poses a problem. It needs to be looked into urgently.

#### 4.7 Forest based Industries:

It is obserbed that out of the total district area, about 63 percent of the forest area is situate in Kinwat tahsil only. Besides as much as 29 percent of the area is under forest when compared with the geographical area of Kinwat tahsil. As against this background, the absence of forest-based industries is the central problem of the area. Timber, grass, firewood are the major and gum, tendu leaves, Moha seeds, lac are the minor forest products of the area in the Integrated Tribal Development Project. The major/minor forest resources have not been satisfactorily harnessed for the benefit of the tribals through the establishment

of forest-based industries. These industries may augment the forest resources and bring about the radical change in the area and the tribal environment as well. The forests thus can play a moderating influence on the Agriculture.

# 4.8 <u>Industrial Estates</u>:

The Integrated Tribal Development Project area also witnesses the absence of industrial estates, mini-industrial estates which may have been served as a boon for development of the area.

## 4.9 <u>Irrigation Facilities</u>:

The project area of Kinwat is lacking the irrigation facilities. The medium and minor irrigation projects can be of great avail for irrigation potential in the area.

# 4.10 Transport and Communication :

THE RESERVE OF THE PROPERTY OF

Added to the central problems of agro-based industries and the other major and medium type of the industries, there is also a dearth of transport and communication facilities in the Integrated Tribal Development Project. The length of surface road is about 200 kilometers only. There is only one all-weather road leading to district headquarter. It lacks in the well developed network of all weather roads. A meter guage rail-line passes through the project area which

and the first har that he will be the first of the program of

The State of State of the Control of the State of

....30/-

connects only 9 villages out of 185 villages. Telephone facility is available at Kinwat only. The postal facilities are available only at few places in the Integrated Tribal Development Project. Thus there is large scope spreading in a out the facilities of public utilities in the project.

### 4.11 Commercial Crops:

It is evident that cotton, the commercial crop of the area occupies a very important position in the economy of Kinwat. The development of transport and communication facilities for efficient and effective marketing of the agricultural/industrial goods is essential. The project area will then become a nexus of marketing facilities.

# 4.12 <u>Electricity</u>:

It is observed that the tribal villages have not been connected with electricity in adequate number. The use of electricity for agricultural purpose is there-fore constrained. With the result, the pace of develop-mental activities allied to agricultural/forest could not make any headway as desired. This thrust area needs to be looked into expeditiously.

### 4.13 Drinking Water

This is rather vexing and an eye-catching problem in the area. The majority of the people in the village go on hunting for drinking water in the summer

season. The problem of safe/potable drinking water for the people in the area is acute one which needs to be promptly attended.

### 4.14 Health needs

This is one of the sector which is the thrust area for planning. There is no mospital in the entire Kinwat tahsil. The public health centre and the subcentres are not adequate to meet the requirement of health services of the entire population in the project area.

# 4.15 <u>Education Facilities</u>:

The tribal population in the project area is mostly illiterate. This has resulted in the low level of literacy. The percentage of literacy in tabsil according to 1981 census is observed to be 26.56. More school and high school facilities need to be opened in the project.

# 5.16 <u>Co-operative Societies</u>:

Although the credit co-operative has been organised in the project area but most of the Adiwasi Credit Co-operatives are defunct. The service and supply of required stock of input like seeds, fertilizers, pesticides is constrained for want of their proper functioning. Further these organisations were considered to be responsible for non-use of farm technology also. The reason cab be ascribed to the educational backwardness

....32/-

of the tribal people in general. Lack of Management, Lack of Loan recovery etc. may also be one of the causes for low level of development.

# 4.17 Publicity and Progoganda:

It is observed that at present the "Cultural units" (Kala Pathak) in the area are entrusted with the publicity of development programmes for the tribals. But the number of performances are very much limited for want of adequate funds for publicity and information. The different modes of publicity in the form of photo--graphs/posters/hand outs/handbill cannot be utilised under the contraint of the financial provision for the project area. The minimum number of cultural programmes with less frequency is witnessed in the project area. But these calculated efforts in the sphere of information and publicity of developmental programmes for the tribal accentuased population need to be with the larger financial provision for the same.

Flow of outlays from State Plan to Tribal Sub-Plan and Sectoral trend in expenditure in the preceding years of VIIth Five Year

Plan

### Introduction :

of the order of Rs.6175/- crores. The flow of outlays to the Tribal Sub Plan accounted for Rs.299/- crores which formed 5.54 percent. The size of the VIIth Five Year Plan (1985-90) was concretised to the tune of Rs. 10,500/- crores out of which the Tribal Sub Plan was formulated for Rs.525/- crores which comes to about 5 percent of the total provision under the Plan.

### TABLE No. 5.1

....34/-

5.2 The information presented in the table above brings out that amongst the different broad sectors - Agriculture and allied services in Tribal Sub-Plan secured 11 percent share of the total State Plan outlay followed by social and community services (8%), transport and communication (7%), rural development (7%), Cooperation (6%) and irrigation and flood control within their respective outlay for the State. The total flow of outlay to the Tribal Sub-Plan area in the state accounted for 5 percent of the State Plan outlay.

The divisible outlay for the Tribal Sub Plan area is calculated to Rs.3277/- crores for the plan period and the percentage distribution for the tribal Sub Plan area works out to 16.02 percent. The Annual flow of funds to the Tribal Sub Plan area for the year 1984-85 and 1985-86 is presented in the table below.

# Budget and Accounting Procedure

The Tribal Sub Plan has been introduced for the first time in the tribal districts of the State since 1976-77. In order to show the expenditure separately,

35/-

a minor head Scheme in Five Year Plan, Tribal Area Sub Plan has been opened under each of the functional Major Head and separate composite demand numbers each of

- 1) Revenue Account
- 2) Capital Account
- 3) Loan Account

have been given under the principle of non-divertability; the saving if any, under Tribal Area Sub-Plan cannot be utilised for the schemes in non-tribal areas and it is ensured that the funds are utilised for the benefit of the Tribal areas only.

- 5.4 The Schemes in the Tribal Sub-Plan areas are being implemented by the existing machinery i.e. Head of Department and their sub-ordinates under the control of the various department of the Mantralaya. The Annual Budget provision is made by the Tribal Development Depart-ment and grants are placed at the disposal of the respect-ive controlling officers of the department concerned.
- 5.5 The sectoral trend of expenditure in the Integrated Tribal Development Project Kinwat has been presented in the Table given below. The trend of expenditure during three annual plans of 1985-86, 1986-87 and 1987-88 seems somewhat steady to the exception of the year 1986-87.

### TABLE NO. 5.3

	ectoral Trend of expenditur	e in Nande	d District	Rs.in'lakhs)
Sr. No.	, **COM OX	Exp	enditure di	ring
		1985-86	1986-77	1987-88
1.	Agriculture & Allied Services	45.36	17.34	24.68
2.	Rural Development (Cooperation)	0.68	44.52	35.01
3.	Water & Power Development	47.73	43.62	75.75
4.	Industry & Mining.	10.06	20.09	10.05
5.	Transport & Communication	19.25	18.39	25,, 50
6.	Social & Community Services.	170.37	104.97	118.88
	Total:	295.75	247 Q3	

(Source: Annual Plan Publications 1986)

5.6 The analysis of the above data in the table indicates that the social and community services claimed a lion share in the total expenditure in the respective years but the sudden decrease is noticable in the year 1986-87. Similar trend is also observed in case of the agriculture/allied services. The expenditure on rural development has abruptly increased in the year 1986-87. The expenditure on water and power development has enormously increased in the year 1987-88. That leads to conclude there is an essential shift from the social services programmes to Rural Development/Water-power Development

programmes which has gained momentum for ameliorating

the slights of rural masses. The priority sectors philosophy is being reviewed for achieving better results through the developmental programmes.

5.7 When the sectoral trend in expenditure is studied through the table below, it indicates that the expenditure on agriculture/allied services showed a substantial decrease in the year 1986-87. Secondly, the programme under 'Rural Development' claimed a good deal of the provisions and manifested proportionately a large of expenditure from 1986-87 onwards. The proportion of expenditure under "Water/power Development" also manifest—ed a sudden increase in the year 1987-88. This may be attributed to the scarcity and famine conditions that continued to exist during the particular year.

The analysis of expenditure under the head "social and community services", appears that the expenditure during the year 1986-87 and 1987-88 are comperable but the expenditure during the initial year of the plan was much higher than the subsequent years of the VIIth plan.

In general, the total expenditure during the year 1986-87 showed a decreasing trend as compared to the earlier year which has now kept the equilibrium with that of 1987-88.

TABLE NO. 5.4

286,08

290,37

- The data on sectoral provision and the expenditure during the three years of the VIIth Plan period when analysed points out that agriculture/allied services and industries-mining sectors could exhaut the total provision during the year 1985-86. The expenditure under the transport and communication and social and community services exceeded the provision in much larger proportion during the particular year. The provisions made under water/power development remained un-utilised to some extent during the first year of the VIIth plan.
- During the second year i.e. 1986-87 the industri-es/mining and village, coltage industries expended the funds
  double the provision made whereas the Agricultupe, allied
  programme, water development, transport and communication
  sectors incurred much less the expenditure than the provi-sion made. But during the third year of the VIIth plan
  the sectoral expenditure is found to be in close agreement
  with the provisions made. That means the provisions made
  were exhausted in toto.
- 5.10 The stress on programmes under the development heads such as Rural Development, Water/Power Development and the Social and Community Services marks the hints towards the weightage to the programmes of general well—being of the poverty ridden masses. The programmes styled under "individual beneficiary" are being popularised for the benefit of the weaker sections of the society

---40/

consisting of Scheduled Tribes/Scheduled Castes,
agricultural labourers etc. The welfare programmes
must be availed by these targetted groups so that they
may cross the poverty line. The individual benefit
schemes thus find wider scope for enhancing or maximis—
ing the income of the vulnerable sections of the society
by providing gainful employment for them.

#### CHAPTER VI

A Special Fund : Nucleus Budget.

#### Introduction

problems and the needs of the people in the project area, special schemes are evolved with the provisions of the 'special fund' called 'Nucleus Budget', It is kept at the disposal of the project officers of the Integrated Tribal Development Projects in the Sub Plan Area of the State. The provision for this fund is in addition to the general funds under Tribal Sub Phan Areas Programmes.

The project officer of the Integrated Tribal Development Project is allowed to dispense with the usual procedure of sanction of schemes. He can formulate as well as implement the schemes of local importance having innovative element. The necessary financial powers have also been delegated to the project officer of the Integrated Tribal Development Projects.

In short, the salient features of the Nucleus Budget is the formulation and implementation of the special schemes for the welfare of tribal families below poverty line with the special fund by the project officers in their area of operation i.e. Integrated Tribal Development Projects.

6.2 The schemes which are implemented with the help of the Nucleus Budget are generally loan and non-loan individual family schemes.

The Nucleus Budget Schemes broadly can be classified in the following manner.

- 1. Schemes aimed at training for self-employment and employment programmes.
- 2. Schemes for the welfare of backward classes especially for the Scheduled Tribes families living Below Poverty line.
- 3. Schemes for improving educational standard of Scheduled Tribes students in professional and technical institutions.
- 4. Schemes relating to agriculture/animal husbandry, Dairy Development and horticulture programmes. (Income generating schemes).
- 5. Schemes for information and publicity of programmes meant for the upliftment of the tribal families.
- 6.3 It may be worth while to take the stock of the schemes implemented by the Project Officer, Integrated Tribal Development Project in the project area of Kinwat during the preceding years.

The schematic classification of schemes implemented with the help of the special fund in the project area can be presented as under :-

- (I) Training or human resource development schemes.
- (II) Income-generating schemes.
- (III) Welfare schemes.

# (I) Training or human resource development schemes.

- Regular information and guidance regarding job opportunities to tribal youth.
- 2. Incentive for recomment in Police & Armed forces.

...43/-

- 3. Incentives to tribal youth securing Ist Division in S.S.C. Examination.
- 4. Special coaching classes for tribal students studying in Xth standard in Govt. Ashram Schools.
- 5. Training in motor-driwing.
- 6. Training in type-writing/stenography.
- 7. Training in various Technical Trades.

### (II) Income generating schemes

- 1. Transport subsidy for supply of one year. high progency buffaloes/cows.
- 3. Financial assistance for starting small scale or cottage industries.
- 3. Schemes for agriculture/dairy development.

### (III) Welfare Schemes.

- 1. Repairs/improvement of Kolam huts by providing A.C. sheets.
- 2. Supply of household utensils to BPL family (below poverty line)
- 3. Electrification of hutments of poor tribals.
- 4. Providing uniforms to tribal attending Angan-Wadis.
- 5. Supply of bicycles to tribal students.
- 6. Supply of covers to electric motors.
- incurred during the last three years i.e. 1985-86, 1986-87, 1987-88 for both the areas. Tribal Sub Plan/O.T.S.P. will facilitate the easy grasp of the schemes implemented under Budget Nucleus/in the Kinwat, I.T.D.P. areas.

A close look at the annual provision and the expenditure for each year it can be adduced and concluded that the total provisions have been completely exhausted during the respective years in both the Areas T.S.P. as well as O.T.S.P.

Besides, the percentage of expenditure in the O.T.S.P. area works out to 47 percent as against 53% in the T.S.P.area for the period under review.

# 6.6 Nucleus Budget with T.D.C. (Revolving fund with T.D.C.)

This is the scheme for self employment of the tribal especially for small trades, serwices and small industries. Loans are granted from the loan portion under Nucleus Budget. The cases for unbanked areas and the cases in which the banks have rejected the loan or/unwilling to disburse the loan on account of distance or any other ground are taken up by the Tribal Development Corporation for sanction of loan.

For this purpose, a revolving fund of Rs.113 lakhs has been initially created and the deserving cases are financed from this fund.

The funds under Nucleus Budget are also kept at the disposal at the Tribal Development Officer for meeting the financial sanction of demands of the tribal inhabitants residing outside the Tribal Sub Plan area of the Project.

In short, the Nucleus Budget at the disposal of Project Officer can meet out the demands of the tribals which are normally not fulfilled by the normal programmes of development activities.

### CHAPTER VII

Schematic Appraisal of sectoral provisions/expenditure under Annual Plan in the VIIth Five Year Plan (1985-86)

7.1 It is rather customary to provide budgetary provisions/expenditure under broad sectors of development and sub head of development thereunder for each year of the Plan period. Further a comprehensive layout of the schemes incorporated in the sub-head of development is provided for proper execution of the schematic programme.

It would, therefore, be pertinent to study the sub-sectorwise provision and expenditure for the preceding Annual Plans for the years 1985-86, 1986-87 and 1987-88 for both areas tribal as well as non-tribal in the district under study. This will help to have a bird's eye view of the trend of expenditure over these years of the VIIth Five Year Plan.

The analytical study in respect of the secotral schemes for the year 1987-88 has been attempted to know the gamut of formulation of the schemes for the area under study. The sub-headwise approved outlay for 1987-88 for both areas are presented in Table No. 7.1. Sub-headwise and Schematic figures of approved outlay for the year 1987-88 are presented (Table No.7.2) with the break-up for the tribal sub-plan areas in Nanded district.

ourc	e:- District Level Schemes in Annua	il Plan 1987≟88. 59/-

- 7.5 The sub-sectorwise details of provision and expenditure under different heads of development are presented in the table. They are further analysed accord—ing to the schemes adopted under the sub-sector with the outlay for tribal sub plan area only.
- The schematic pattern when studied indicates 7.6 that the schemes for maximising the agricultural produc--tion through the pulses and oil seed programmes due weightage has been given to their production. therefore, necessary to educate the farm families for the adoption of high- yielding varieties of both crops. The development of seed-farms, seed-multiplication farms stands imperative. The purposeful training to the select--ed farm families is required to be imparted as a part of agriculture and allied services programme. Financial pro--vision for meeting expenditure may be made. The prescrip--tion of theining programme to the farm families will certainly secure their cooperation and participation in the endeavour of boosting agricultural production. Dry farm--ing needs to be introduced and popularised. "Lab to land programme for transfer of farm technology must be vigourously adopted and followed.
- 7.7 The substantial provision has been made for the development of animal husbandry vis-a-vis the crop husbandry. The all round development in the areas of dairy, poultry/fisheries with the priority can ease the problem of unemployment particularly amongst tribals.

....60/-

The propoganda on the massive scale must attract more financial provision to rouse the interest amongst the weaker section of the society and the targetted groups within the areas of Integrated Tribal Development Project. The cultivation of improved fodder crops may be adopted and popularised with the storage facilities of existing fodder resources.

- 7.8 Under the forest sector, there finds a missing links for the forest based industries (mini and midy type industrial units) which will open avenues of employment for the larger masses and particularly the tribals youths and women in the project area. The financial provision presently made need to be doubled for accommodating the potential forest-based industries and the creative additional rural employment thereby.
- 7.9 The potentials of development through the small scale industries need to be attended through the substantial financial provision. At present, purchase of shares of large and medium industrial units are not financially provided. Need-based mini industrial estates and the industries of artisans must find adequate scope with the financial assistance to them.
- 7.10 In the field of Transport and Communication the financial provision is somewhat less than 8 percent of the total expenditure. The development of infrastructure facilities hinges upon the development of

. . . . 61/-

transport and communication. In view of this, the provision under the sector appears to be minimum.

7.11 The social and community service sector encom-passing general education, medical-health, water supply
and sanitation, housing, urban development, welfare
programme of backward classes and labours claims for
larger percentage of the total approved expenditure
during the year 1987\_88. The provision for labour and
labour welfare need to be enhanced to equip themselves
with the training and adequate skill for job opportunities
in the nearby areas.

....62/-

g the first of the second of t 

the state of the state of

#### CHAPTER VIII

# Development potential in the project area Broad Sectoral outline.

- on agriculture for their livelihood. The majority of the tribals are having small and uneconomic holdings and the large number of them are either casual labourers or unskilled labourers. The developmental efforts, therefore, must emphasize the urgent need for development of agricultural and allied sectors such as animal husbandry, fishery, Horticulture and forestry in the project area.
- 8.2 The data collected through the Universal Bench Survey 1980 (Household phase) highlights position of the households with reference to their source of income in the Tribal Sub Plan area of Kinwat.

TABLE NO. 8.1

Distribution of families according to the Source of income in the I.T.D.P. area of Kinwat.

No. Source of income Number of S.T. S	
1. Farming 4305 12 2. Agricultural Labour 3633 11 3. Forest Labour and 281 Forest Resources 26 4. Trading 172 2 5. Services 506 2	11 8954 14470 15 4228 9016 75 137 493 9 11 \$6 24 1363 1759 58 971 1735 64 1950 3661

Similarly the occupational distribution of Scheduled Tribes households in Kinwat Integrated Tribal Development Project as revealed from the Universal Bench Mark Survey (Household phase 1980) leads to the conclusion that there were about 48.19 percent cultivating house-holds. The agricultural labourers constituted about 51.81%. The further distribution of cultivating households which were living below poverty line constituted of the order of 90.16 percent. Thus the bulk of the rural Scheduled Tribes households were either cultivators or agricultural labourers dependent upon the agriculture. The developmental potential for such families necessitates the efforts in agricultural and allied sectors such as animal husbandry, forestry, horticulture and village industries.

- 8.3 In view of the developmental potentials/prospects, the programme of development may, therefore, proceed on the points mentioned below:
  - 1) Release of agricultural finance to tribal farm families. In case of forest labourers, the credit must flow from F.D.C.M.
  - 2) Development of animal husbandry.
  - 3) Establishment of forest-base industries.
  - 4) Divercification of human resources through training and development of appropriate skills.
  - 5) Development of complementary measures such as
    - a) Better transport facilities.
    - b) Extension of credit facilities.
    - c) Health and nutrition cover to the targetted tribal groups.

....64/-

- 8.4 The programme of agricultural production is required to be co-ordinated with the allied programmes of animal husbandry covering the development of dairy and poultry projects. The problem of marketing would be tackled by organising the cooperative societies.
- 8.5 Agriculture in tribal area which is solely dependent upon rains requires to be substituted with dry-farming techniques and suitable cropping pattern under dry-farming. The requisite incentives to the farm families need to be provided for the adoption of new techniques.
- 8.6 Further the setting up of agro-based industries in the massive production areas calls for a special con-sideration. The industrial base to the agricultural production will be an additional linkage for ensuring the income flow to the farm families in the rural areas especially tribal areas which are characterised by low level of income and low production.
- 8.7 Under forestry sector, the programmes encom-passing development of central nurseries, forest
  resources may be extended. The establishment of medium-range industries based on forest products would certainly
  open avenue for massive employment to the needy tribal
  youths.
- 8.8 Forest resources are required to be harnessed for emeliorating the conditions of the tribal communities

in the project area by augumenting the productivity through opening the avenues for employment for weaker sections of the society.

The timber, gum, grass, Mohua seeds, Tendu leaves are some of the important forest products which will provide a raw material to the forest-based industries. Social forestry need to be stressed because it is meant to bring a social change, to ameliorate distortions in the economy and to ensure a more equitable distribution of income.

A unit for oil extraction from Mohua seeds, which are abundantly found in the area will certainly create employment opportunities to the needy tribals in the project area. This will go a long way in curbing down the tendency of migration for livelihood amongst the tribals.

The assessment of the present sources of irrigation in the project area as revealed from the Universal Bench Mark Survey and the District Statistical Abstract 1984-85 indicates that the limited sources of irrigation exist in the project area. Predominently amongst the principal sources of irrigation, the wells/Bhandara/tanks are the common. However, the number of wells are observed to be more in the project area of Kinwat.

.....66/-

It is expected that with the commission of the medium irrigation projects in the project area, the cropping pattern will undergo a change to a greater extent. The commercial crops will replace the usual pattern of crops to the maximum possible in the future. The minor irrigation projects in both local/State sector must receive top priority for all round development of the tribal areas. Organisation of lift irrigation societies, construction of percolation and small irrigation tanks and construction of new well may be stressed in the new programmes outlined for the development.

8.10 The glimpses of the migration tendency on the part of the tribal groups in the area can be studied from Table No. 8.2.

TABLE No. 8.2
Tribe-wise percentage of mobility

***						
Sr. No.	Name	of tri	bes	Total No of house -holds.	. Not having sufficient income.	% of fami- -lies going outside.
1. 2. 3. 4.	Gond Andh Pardhan Kolam Bhil			3088 2226 459 436 167	2071 1338 324 313 93	70 55 75 75 55
<b>25 ma 102 103</b>	s note and was over one also delle and	Total	·	6376	4139	65

(Source: Universal Bench Mark Survey 1980)

....67/-

The analysis of data indicates that 75% families from Pardhan and Kolam Scheduled Tribes migrate to earn their living. Next to them is the Gond, who also migrate because of their poor economic conditions. The insufficiency of income is the driving force for migration outside the place of residence for earning the livelihood.

- 8.11 The programmes for the welfare of backward classes in the primary schools/hostels for boys and girls/ Ashram Schools may be given due weightage with the special financial provisions. Vocational/technical educational institutions at growth centres selected in the pockets of tribal habitats will pave way for their development.
- 8.12 The programmes under the health and nutrition have a wide potential in the operational area of the project. The purposeful planning in this respect will certainly ameliorate the plights of the tribal communities.
- 8.1% The problem of thelter appears to be imminent one. It must be attended to with top most priority for the agricultural labours and marginal farm families and backward classes communities in the project area.
- 8.14 The programmes for extending the infrastruc-tural facilities need to be attended with the provision
  of substantial funds therefor. The problem of drink-ing water supply under special measures and simple

....68/-

measures must find immediate solution through the co-ordination of G.S.D.A.'s boring operations and the environmental engineering department's phasal programmes of providing permanent potable drinking water in the villages where the problem is acute one.

\_\_\_\_\_

Boundary of the Committee of the Section of the Committee and the second s

### CHAPTER IX

# Observations / Conclusions / Suggestions

- 9.1 Since the area development programmes aim at the development of individual families in the villages of the Integrated Tribal Development Project, it stands imperative to have the exhaustive list of the villages and the families covered in and outside the area as styled as T.S.P. and O.T.S.P. villages for allocation of schematic funds and their appraisal in due course. It is, therefore, suggested to prepare the multi-damen-sional list of villages with the application of four criteria. They are as under :-
- 1) Accessibility to the village.

The state of the s

- 2) Tribal concentration in the village.
- 3) Population size of the village.
- 4) Level of development of the village.

Under the first criteria - accessibility to the village, the classification may further be attempted from the view points of (a) accessible village, (b) less accessible village, and (c) inaccessible or remote village.

The second criteria of classification of villages in the project area must reckon the priority or preferential order of villages that may be arranged according to tribal concentration:

1) High concentration (with more than 75%)

....70/-

- 2) Medium concentration (between 50 to 75%)
- 3) Less concentration (Less than 50%)

The third criteria of categorisation of the villages must take care of size of the villages i.e. population of the villages. The classification of villages having regard to the population of each village will enable to sort out the programmes for bigger/smaller targetted groups in each village of the project area. The classification of all the villages based on the population in the project area may proceed on the follow—ing lines—

- 1) Large villages (above 300 population)
- 2) Medium size villages (with 100-300 population)
- 3) Small villages (with population less than 100)

Having sorted out the villages with reference; to the accessibility, tribal concentration and population size of the village in the project area, the level of development in each village must be looked into before prescribing and formulating any scheme for the individual families. It should be determined by taking into consideration the number of developmental schemes and infrastructural facilities existing in the village.

It is, therefore, suggested that the following factors must be weighed/reckoned to determine the deve--lopmental level of the village.

- 1) Educational facilities available in the village (i.e. primary/middle/high school)
- 2) Drinking Water Supply.

....71/-

- 3) Electricity
- 4) Medical facilities
- 5) Village level functionaries
- 6) Irrigation sources

Besides, the score system may be used for arranging the villages according to their level of develop-ment. The villages will be scored on the basis of the facilities extant in the area.

- 1) High (all the facilities are available)
- 2) Medium (only 3 to 4 facilities available)
- 3) Low (only 1 or 2 facilities are provided)

This classification of villages will be the guideline for formulating the need-based programmes for the local people. The priority amongst the programmes will be decided on the non\_existance of the facilities and the category assigned to the village on such classification. The formulation and administration of programme for speedy development of backward areas will certainly gain momentum on this classification of the village in the project area.

Thus multi-dimensional classification of villages in the project area is rather pre-requisite for accelerating the pace of developmental programmes to be formulated for tribal development.

# 9.2 Organisation of Bench Mark Survey for CTSP families

Bench Mark Survey of tribal families living outside the Tribal Sub Plan area may be carried out at

the earliest and adequate provisions be made to assist such of these dispersed tribal families as are living below poverty line.

The Bench Mark Survey of tribal families
living outside the sub plan will open avenue for the socioeconomic development of the tribals in that area who are
not getting adequate benefits of the programmes prescribed
for tribal development. In view of this specific doses
of programme formulation will be practised for the tar-getted tribal families in that area.

## 9.3 Allocation of funds - General and Principal

Amongst all the schemes meant for tribal develop-ment, family oriented schemes must receive a lion share.
At least 50% of the Tribal Sub Plan outlay should go to
family oriented schemes. Suitable and viable income
generating schemes should be formulated for different
areas and different tribal groups in a well-thought out
and co-ordinated manner.

9.4 The concept of family-oriented schemes or beneficiary oriented schemes has gained currency in tribal development programmes. If the vast masses of Scheduled Tribes are to be raised above the poverty line, an amorphus approach to their development would hardly make any headway or an impact unless the family is taken as a unit. The concept is therefore, vital for poverty eradication programmes in the tribal areas.

.....73/-

As per the guidelines emerged from the documents of the planning Commission the special central assistance is to be made available mainly for family-oriented progra-mmes and incidental infrastructure. The formulation of family-oriented schemes must receive top priority in the project area planning.

But at present an arithmatical approach to the number of tribal families assisted for income-generating schemes has been adopted. Very often it gives an exaggerated notion about the families helped to cross the poverty line. Since the purpose of family-oriented of family benefitting schemes is to lift up the beneficiary family above the poverty line and provide it with necessary financial footing or wherewithal to fashion a mode of living with minimum basic requirement of life on a continuing basis, the content of such schemes should be construed accordingly. In other words, the schemes or a mix of schemes should be sufficient and sold esigned as to lift the family well above the poverty line and sustain it there on a continuing basis.

# 9.5 Package of schemes imperative

For this purpose, massive imperative efforts with package of schemes is called for. It is, therefore, necess-ary to group the family-oriented schemes into the follow-ing two categories.

- 1) family-oriented anti-poverty schemes, and
- 2) family-oriented schemes of economic assistance.

....74/-

For the purpose of family-oriented antipoverty schemes, whether it be a single scheme or a
package of schemes, the family being the unit to be
assisted with one or more such schemes in such a manner
as to secure an income of the magnitude (a certain level
of income as in programme of ITDP Rs. 3600/-) on a continuing and sustained basis (i.e. regular base) and not for
a temporary period. All other schemes should be considered
as only family-oriented economic assistance schemes.

As per guidelines it has been observed that an investment of Rs.10,000/- per mamily should be considered to be the average requirement per family for bringing it above the poverty line.

About 10 percent of the total coverage of tribal families under economic assistance can be taken to have crossed the poverty line.

I.R.D.P. envisaged assisting 600 poor families in each block in the accounting year. This norm may be suitably modified for the tribal areas according to the classification of villages as attempted under Point No. 9.1 above.

# 9.6 I.T.D.P. project Officer's status/Role

At present the Project Officer of Integrated Tribal Development Project has little control over the local functionaries of different development departments. In order to make the ITDP more effective, it is suggested

. . . . 75/---

that Project Officer should be the senior officer having close links with tribal life. His hands may be strength—ened by providing additional staff even at the village level of Revenue Sarra level". Further, the Block Develop—ment Officers alongwith their staff may be placed fully or concurrently under the administrative control of the Project Officer to secure well co-ordination of the develop—ment programmes.

9.7 In the context of sectoral programmes it is proposed to provide a brief account of the recommendation in the following few lines for the core sectors only. Agriculture :- The Scheduled Tribes which are generally classified on the basis of holdings as small and marginal farmers are not able to fully reap the advantages of the latest farm technology. It is, therefore, necessary that they should be provided with adequate financial assistance for taking up intensive cultivation. They should also be motivated and trained to pursue occupations other than agri-The specific schemes in this regard may lead -culture. to the achievement of twin objectives of food and employ--ment as incorporated in the VIIth Five Year Plan document.

## 9.8 <u>Ideal farming system approach</u>

As overwhelming majority of the tribals are settled agriculturists in the area with small and uneconomic holdings having less productivity in general Potentials of increasing income over the existing .....76/-

level rests in the following combinations of avocations for the farm communities.

- 1) Crop + Dairy + : Goat Farming
- 2) Crop + Goat + Farming
- 3) Crop + Dairy + Poultry farming in their order.

An association of dairy farming with crop husbandry constitutes a major source of income and employ—ment. Only crop farming system proves to be the poorest choice in terms of income and employment generation.

With the average size of land holdings, optimum crop farm—ing cannot generate sufficient income which brings the farmers above the poverty line. It is, therefore, proposed that small farmers should follow the farming system suggested above in their order.

alongwith other services and facilities such as arrange—
—ment of supply of input (agricultural), marketing of pro—
ducts and extension services inclusive of veterinary
services are required to be made available to the farmers.

With the result the weaker sections of the society may
take full advantage of these services and raise their
income within a shorter period of 2-3 years and upgrade
their standard of living through the family system
approach which is scientific adoption of livestock along—
with crop enterprise.

and a series of the series of

#### 9.10 Forestry Sector:

With the emphasis on family oriented programmes, the special attention to devising suitable schemes in the forestry sector to support tribal families with a view to bring them above the poverty line (schemes like Kishan Nurseries) should be encouraged.

Further social forestry should be encouraged and promoted in and ground tribal villages. The plantation of species relevant to tribal needs like food, fruits fodder, fuel, timber etc. should be undertaken especially in the tribal areas.

# 9.11 Education: Extension of Industrial Training facilities.

Because of lack of training/education, candidates of these communities have failed to get any banefits out of industrial establishments set up in their areas. The industrial training centres with adequate facilities to the tribals need to be opened on the priority basis.

# 9.12 <u>Ashram School</u> and the state of the st

Ashram (type) schools which are better managed and are functioning efficiently when compared to other conventional schools. They should be increased to cover a wider student population in the project area.

The Ashram school complexes need to be develop-ed either as agricultural schools or as industrial
schools for turning out the trained personnel who may

find evenues of employment both in Government/private concerns. Further suitable combination of industrial trades and agricultural courses in the selective Ashram school complexes in the initial stages will be pioneering and emulating example. It is further proposed that special attention should be paid to impart technical training to the tribals through the close association of voluntary organisations.

9.13 In the non-tribal area (OTSP) central primary school attended by single teacher which will impart instructions upto Class V may be started - the level of backward-ness in education should be determined with reference to an area or a community. Thus the Project Officer may attempt at the identification of the literacy level of various tribal communities in the Project area.

"Special citizen education programme" may be formulated to make the tribals aware of the new social and economic change being ushered through the planning process introduced in the tribal areas.

Some literature in the local dialect should be prepared by giving the idea as to the administrative - structure of local authorities- available credit (co-operative banks) - provision made in the plan document, similarly youth participation through youth organisations may be sought for sparsely populated and remote areas to make acquitance with the planning process envisaged for tribal development.

....79/\_

School health programme should claim special attention in the project area. The students population in the Integrated Tribal Development Project area must be covered to the extent possible.

### 9.14 Medical and Health

General review of the health situation of the area should be undertaken. The review will unfold the pre-valence of any special diseases ailments amongst the tribal communities viz-a-viz the special efforts taken by the Government. This critical appraisal will enable to determine and draft the special statement of priorities for medical services in the project area. The general schematic approach will not do good to the backward tribal communities. The special measures needs to be devised for expansion of indoor facilities.

It is necessary to prepare a medical map which will highlight the existing medical facilities in the form of Primary Health Centre/Family Planning Centre and sub centres to cater to the need of tribal population in the project area. Similarly, the action plan for extending medical facilities to the neglected pockets in the project area will find requisite material through this document.

## 9.15 Role of voluntary organisations:

The role of voluntary organisation in the project of area requires to be taken note/for full integrated develop-ment. Hence study of the existing organisations in

the project area is quite necessary. They are required to be grouped under two categories.

- (q) aided voluntary organisations, and
- (b) non-aided voluntary organisations.

Secondly, their classification may be made on the basis of purpose/spheres of activities leading of broad sectoral programmes.

Further identification of precise role of voluntary organisation in the next five years will throw some light on the operational fields of their activities and the complementary part they are expected to play in the developmental efforts for the upliftment of tribal people in the project area.

- 9.16 In addition, the voluntary organisation may be called upon to make a shift from general education to women education/adult education in the mass backward areas. The joint efforts of the Government and voluntary organisations will go a long way in achieving desired impact of the programmes meant for the tribal communities in particular.
- 9.17 The Project Officer at the Integrated Tribal Development Project level should prepare a profile of programmes to be administered in elose association of the voluntary organisation in the project area. The sector—wise activities to be listed out for formulation and implementation of the programmes at their respective levels. The periodical review of the programme

...81/-

implementation may be carried out for future planning and adoption of correctional measures in time.

With the close association of the voluntary organisations in the project area - the problematic areas to be handled systematically can be classified broadly as

- 1) Economic/educational backwardness,
- 2) Anti-poverty programmes (Poverty amelioration schemes)
- 3) Production programmes (based on resources available)

This will lead to easy grasp of the problems so as to find out concrete solution for them. Further it will also certainly lead to the physical, financial and admini-strative integration in the planning process of the Inte-grated Tribal Development Project Area.

9.18 Setting up of Industrial Development Projects in the area.

In the neglected pockets of the tribal areas, the Maharashtra Tribal Development Corporation Limited, should take up some industrial development which would stand in good stead for the welfare of future tribal generation in the State. To name the project it can be said that

- 1) Mahua seed oil extraction
- 2) Gum processing unit can work successfully.

The joint venture with Regional Developmental Corporations and Khadi and Village Industries Council would be feasible to bring about the development of the

area and people as well.

## 9,19 Publicity and information

The welfare programmes and amelicrative schemes meant for the targeted tribal groups should be published adequately in order to elicit participation of the people at large in the project area. For the purpose, a special fund for the publicity programmes may be sanctioned. The different modes of publicity and information such as photoposters, hand bills and pamplets are to be stressed for giving thrust to the schemes/crash programmes/programmes being implemented at the project level.

The programmes through Kala pathak i.e. (cultural groups) in the area should be popularised. At present the developmental programmes are published through the local cultural units in a limited measure under the financial constraint.

9.20 It is proposed to organise "Adiwasi" cultivators Shibir". Students gathering, felicitation programmes of "Sheti Nishta" agriculturists in the project area.

Naturally, it is quite imperative that the programme contents should incorporate sectors schemes and Governmental efforts in this regard. The publicity cell in the project office needs to be strengthened with some sub-ordinate staff. This may help to remove the constraints on the programmes currently followed.

9.21 The project report at the I.T.D.P. level to be the comprehensive and illustrative document must incorporate

....83/-

the following maps

- 1) Educational map depicting the Ashram school complexes, other pre-primary -primary schools/ colleges in the project area.
- 2) Health Map Spelling out the Medical facilities in the
  shape of public Health centres / Family Planning
  Centres/ Sub Centres at the service of tribal
  targetted groups.
- 3) Road Map showing linkage with marketing centres/growth centres.
- 4) <u>Irrigation & Power Map</u>

  It must contain irrigation by source village electrified.
- 5) Locations of Credit-Cooperative Societies in the project area.
- 9.22 The mapping of the areas of concentration and the clusters of Scheduled Tribes habitations left out of the sub plan area within the Integrated Tribal Development Project will certainly spell out the developmental needs of the people and the area in more intensive manner and will be the pointer to the formulating schemes for/both simulteneously.
- 9.22 In conclusion, it can be said that "Implementation Planning" should be regarded as an integral part of "develop-ment planning" at all relevant levels in the Integrated Tribal Development Project areas. Further "Management by objectives" as envisaged and found in big industrial

undertakings should be the need of the time. Naturally the project level development administration will set the task of accomplishing the following objectives:-

- 1) Removal or eradication of primary poverty which signifies relatively more serious gaps in the satisfaction of human wants of basic nature.
- 2) Full employment to the masses especially tribals.
- 3) Universal literacy amongst tribal community.
- 4) Provision of adequate medical facilities.

This is a set of inter related objectives rather than discrete ones. The Co-operation and co-ordination of all developmental agencies in the field is assumed at all the levels for better achievements under tribal development.

# (TSP : Tribal Sub Plan)

The VIIth Five Year Plan era commenced from the year 1985-86 and nearly three and half years have been elapsed since then. It is now pertinent to have the mid-term appraisal of the expenditure both for the State and the Tribal Sub Plan area, which may provide an opportunity to take correctional measures during the remain—ing plan period i.e. 1988-90. The over view of the expenditure incurred during the three years is presented in the Table No. 1-(B) and that for the remaining plan period 1989-90 in the Table No. 1(C).

of the States Five Year Plan/Annual Plan and it is formulated by the flow of outlays from the various developmentated by the flow of outlays from the various developmentated by the flow of outlays from the various developmentated by the flow of outlays from the various developmentated by the flow of outlays from the various developmentated by Development, Irrigation, Power Development, Roads, Education, Backward Class Welfare etc. The outlay originally carved out for the Tribal Sub Plan Area in the VIIth Five Year Plan was Rs.525.03 crores which comes about 5% of the States total approved outlay. The State Government has however - consciously tried to provide more outlays for the T.S.P.Area under successive Annual Plans with a view to raise the provision to about 9 percent

of the total plan outlay in a phaced manner.

The analysis of the Statement No. 1(B), 1(C) brings out that the General State Plan has incurred 55.50% expenditure during the first three years of the VIIth Five Year Plan outlay while the expenditure in the T.S.P.Area for the corresponding years was to the tune of 63.04%, of the total T.S.P. plan outlay. So the remainder 2 years of the VIIth Five Year Plan has to proceed with the anticipated expenditure of 45% in the State and 37% in T.S.P. area of the State.

#### (B) Position of outlay and expenditure in Distt. Nanded.

10.5 The sectorwise appraisal of the outlay provided for the District level schemes for both the areas, non-tribal and Tribal Sub Plan Area during the first three years of the VIIth Five Year Plan will highlight the comparative position of financial allocation in Nanded district. The Table No. 2 presents the broad sectorwise approved outlay for both the areas (General and T.S.P.) during the plan period 1985-88 in Nanded district.

approved outlay for the District level schemes for the first three years indicates that the flow of funds to the Tribal Sub Plan area in the district rose from Rs.245.75 lakhs in 1985-86 to Rs.261.15 lakhs in 1986-87 and Rs.290.37 lakhs in the year 1987-88. There is a slight increasing trend of flow to the T.S.P. area of the district. The general plan size has also maintained the equilibrium during the first three years of the VIIth Five Year Plan.

10.7 The appraisal of actual expenditure for the first three years presented in the table No. 3 points out that there has been a steady rise in expenditure during the first year i.e. 1985-86 while there is a slight decrease in the actual expenditure as compared to the approved out-lay in the year 1986-87 and the following year 1987-88.

The actual expenditure in the years 1986-87 and 1987-88 in the tribal area is more or less the same.

# Position of outlay & Expenditure in Tribal Sub Plan Area - I.T.D.P. Kinwat.

10.8 On the basis of approved outlay and the actual expenditure during the first three years of the VIIth Five Year Plan approved outlay and anticipated expenditure for the remainder period according to broad head of development have been worked out and presented in the table No. 4. The flow of funds to the Tribal Sub Plan area in Nanded district has been earmarked as Rs.285.86 lakhs and Rs. 283.00 lakhs for 1988-89 and 1989-90 respectively. The sectoral outlay and the anticipated expenditure during residue Plan period 1988-90 have been worked out with the consideration of thrust areas and their requirements.

10.10 The analysis of actual expenditure during the first three years leads to the conclusion that out of total approved outlay of Rs.1366.13 for the VIIth Five Year Plan of the Tribal area of Nanded district, the total actual expenditure formed 57.69 percent leaving the 42.31 percent approved outlay for the remainder plan period.

10.11 The sub-sectorwise annual expenditure both actual and projected for the I.T.D.P. Kinwat during the VIIth Plan period 1985-90 has been consolidated and presented in the Table No. 6.

Table No.6

10.12 The Sub-sectorwise anticipated expenditure for the annual plans 1988-89 and 1989-90 has been worked out on the basis of the approved outlay sanctioned for the period. The thrust areas which will require more investment have been visualised and spelt out under the broad heads of development such as Agricultural/Allied services (covering Crop husbandry, Dairy development, Co-operation and Rural Development) Irrigation, Power development, Transport and communication, Social and community services (encompassing education, public health more prominently.)

10.13 Under Agricultural and Allied services, sector—"the small and marginal farmers" need to be assisted also financially and with agricultural inputs and implements. Further, the agricultural labourers also need to be financially assisted through the supply of milch animals especially of exotic breeds.

10.14 A detailed survey of the families living below the poverty line in the I.T.D.P. area may be conducted so as to make the uptodate list of the genuine B.P.L. tribal families. Similarly a trade survey of rural artisans calls for positive steps to cater to their needs.

10.15 Under sub sector cooperation, the Adivasi Cooperative credit societies need be revamped with the financial assistance and trained managerial personnel for their smooth functioning and the implementation of of certain specific programmes for the targetted groups

through their media.

- 10.16 The due weightage presently being given to the individual family, oriented programmes/schemes under I.R.D.P. will have to be continued with the composite schemes for the families and the community.
- 10.17 The minor irrigation programme is required to be accentuated by undertaking the programme of depening the existing irrigation wells of tribals and also sinking of new wells. Similarly, the supply of electric pumps/electric motors on such wells be fitted by giving priority to the families of small and marginal farmers.
- 10.18 A road development plan already prepared by the Building and Communication Department of the State for the tribal area of the I.T.D.P. and for the inaccessible areas will firstly concentrate on approach roads and link—ing roads of village and Tandas/Gudas in the area with the all weather roads.
- 10.19 Under social and community services, the general education, technical education, public health, housing and nutrition will have to be stressed with the formulation of schemes for the targetted groups of population. The expeditious implementation of schemes aimed at the targetted groups will rouse the public interest and participation in the planning process and thereby achieve the fruits of development programmes adopted for them.

## Over view of VIth and VIIth Five Year Plan of the I.T.D.P. Kinwat

10.20 The comparative study of the financial perfor-mance of the VIth and VIIth Five Year Plan of the I.T.D.P.
Kinwat will provide an opportunity to base and project
the financial requirements of the VIIIth Five Year Plan
(1990-95) for the I.T.D.P.

10.21 The table No.7 (a) depicts the financial performance during the VIth Five Year Plan of the I.T.D.P. Kinwat (1980-85).

The appraisal of approved outlay and the actual expenditure incurred during the VIth Five Year Plan shows that the total approved outlay was earmarked as Rs. 791.68 lakhs against which the actual total expenditure was to the tune of Rs. 817.94 lakhs. The percentage of actual expenditure to total approved outlay worked out to 103.32. Thus the actual expenditure during the VIth Five Year Plan period exceeded the approved outlay by 3.32 percent.

The abstract of financial performance during the VIIth Five Year Plan of the I.T.D.P. Kinwat on the basis of actual and anticipated expenditure is presented in the table No. 7 (B).

#### CHAPTER XI

### Broad perspective of VIIIth Five Year Plan (1990-95) of I.T.D.P. - Kinwat.

Perspective budget provisions in the annual plans under VIIIth Five Year Plan for the Integrated Tribal Development Project Kinwat has been prepared on the basis of methodology of allocation of total outlay and the actual expenditure for the previous Five Year Plans and the thrust areas of the Integrated Tribal Development Project under different heads of development. The budgetary provisions under each annual plan of the VIIIth Five Year Plan of the Int.D.P. are projected and presented in the Table No. 1.

Table No. 1

Projected Budgetary Provision in VIIIth Five Year Plan
of I.T.D.P. Kinwat.

		Total	2077.50	8 144 and 144	

11.2 Generally it can be stated that the study of approved outlay and actual expenditure figures of the previous two Five Year Plans points out that there has

been 50 percent addition in the actual expenditure to form the next plan's outlay. The annual rereentage of allocating of funds for each year has been adhered to and it ranges from 18 percent to 21 percent of the total outlay for the plan period.

11.3 The model broad-sectorwise tentative outlay in the first year of the VIIIth Five Year Plan (1990-95) for the I.T.D.P. Kinwat is proposed and presented in the Table No. 2.

#### Table No. 2

#### 11.4 Schematic Programmes:

Broad priority sectors under the VIIIth Five Year Plan of the Integrated Tribal Development Project can be summarised in the following lines. An attempt has been made to spell out the details of the schemes under each

sector in their preferential order.

#### (a) Agriculture/allied services.

As the agriculture is the main-stay of the majority of the masses in the Integrated Tribal Development Project area, agriculture and allied services will natura--lly assume more priority and attract more financial provisions for the developmental programmes thereunder. The Crop Husbandry, Animal Husbandry, Irrigation, Dairy Develop--ment, Forestry sub-sectors will have renewed stress and earmarking of financial allocation. The prominent schemes based on resources available in the I.T.D.P. can be formula--ted and implemented under each sub-sector as "Model Schemes" may be enumerated as under :-

#### Production oriented schemes/Income generated schemes.

- (i) Supply of agriculture inputs/agricultural implements to the small and marginal farmers communities at the subsidised rates;
- (ii) Supply of milch animals to the agricultur#1 labourers;
- (iii) Formation of Dairy Cooperatives for collection and storage of milk.
  - (iv) Establishing animal health care centres;
    - (v) Reviving of Adiwasi Cooperatives (Primary
      Credit Societies) with trained management for
      securing the real impact of developmental programmes meant for the tribals;
  - (vi) Deepening of irrigation wells ;

- (vii) Providing of boring machinery (rigs) on subsidised rates;
- (viii) Construction of Kolhapur type bandharas for providing irrigation facilities ;
  - (ix) Plantation of bamboo/in close cooperation of Forest Department and the local people for catering the needs of rural artisans. So also supplying raw material to the forest based industries such as pulp and paper;
  - (x) Setting up of agro-forest based industries in the locality e.g. spinning mill, sugar factory, paper and pulp industries, wooden toys, furniture, industries, agricultural implements, brick industries-

#### (b) Water/Power Development

Next to this, water development (irrigation) and power development sectors will call for massive invest—ment and speedy implementation of the schemes during the VIIIth Five Year Plan. The electrification of <u>Gudas/Pods/Tandas</u> of tribal communities may form the thrust areas. The extension of irrigation facilities through the newly constructed medium irrigation projects in the I.T.D.P. areas will assume greater importance.

#### (c) Transport and Communication:

The developmental programmes under road develop-ment will seek additional funds for constructing all
weather roads and link roads to develop proper infrastruc-ture in the I.T.D.P. area.

#### (d) Social and community services.

This sector will be continued with adequate financial provision during the plan period, especially the following sub-sectors will assume priority amongst the other sub-sectors -

- i) Education,
- ii) Public Health.
- iii) Water supply,
  - iv) Nutrition.
  - v) Housing,
- vi) Welfare of backward classes,
- vii) Information and Publicity,
- (i) The expansion of educational facilities under educational programme for tribals may necessitate the opening of additional Ashram or residential schools for tribal boys and girls in both the areas Tribal Sub Plan and the Outside Tribal Sub Plan Area. Some of the Ashram Schools will be required to be upgraded into post-basic category. The issue of opening of new hostels for tribal boys and girls at the Integrated Tribal Development Project head-quar--ter may engage attention and priority. Similarly, the higher education, technical education facility and teacher's training programme will need emphasis to cope up the area need and call for additional funds during the plan period. The establishment of the poly-technic at the I.T.D.P. Headquarter will go a long way in opening the avenues of employ--ment for tribal boys and girls and easing the unemployment problem.

- (ii) Medical Health facilities in the tribal pockets of the Tribal Sub Plan and Outside Tribal Sub Plan area will be extended. The tribal population in the far flung areas of the I.T.D.P. and the tahsil will be served through the opening of sub-centres at appropriate places.
- (iii) The problem of shelter for weaker sections must assume importance during the plan period and it is necess—ary to tackle it with urgency. The social housing schemes and housing cooperatives need to be encouraged with the provision and release of adequate finance for them.

### (iv) Special case of Primitive tribal community in the I.T.D.P. area.

One of the primitive tribes viz. Kolams has been located in the I.T.D.P. area. At present, they are being looked after without any special financial provision and programmes. It is, therefore, proposed that the agriculture/allied services sectoral schemes for a such tribes may be introduced with 100 percent financial help. The schematic pattern for such primitive tribes may be devised suitably taking into consideration the past experience of different schemes implemented for the Kolam in Yeotmal district under Primitive tribe programmes.

#### Summary of Strategy of development and programmes.

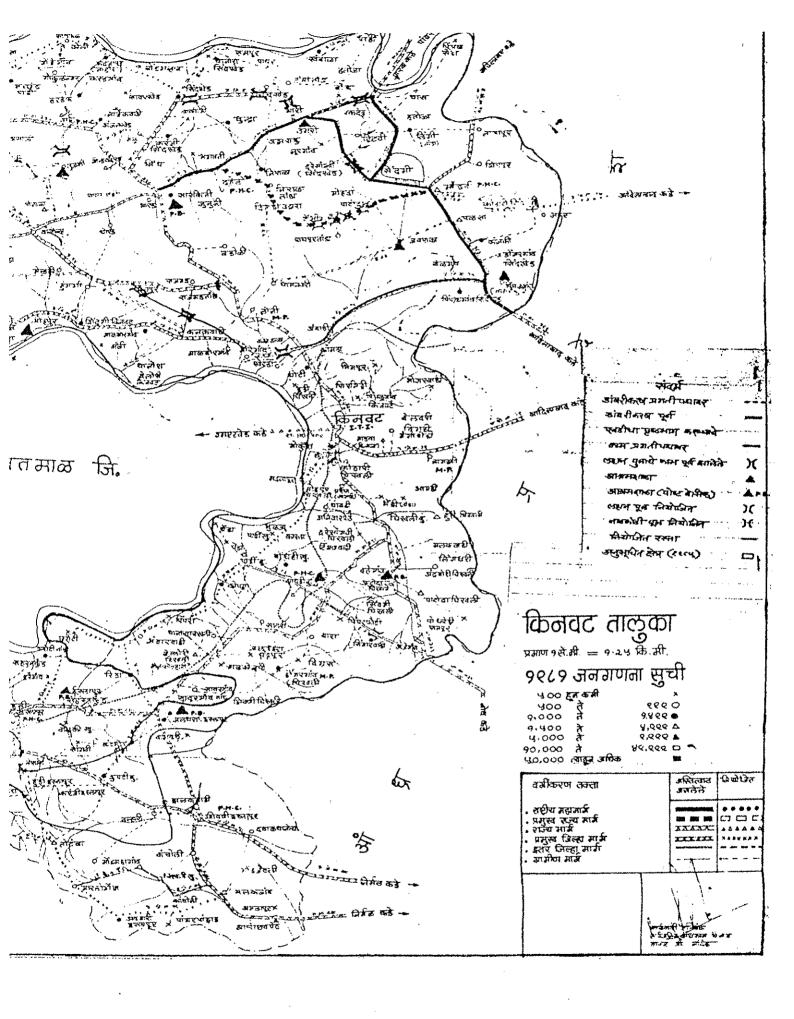

11.5 The tribal subsplan is an area plan. Therefore, the programmes need to be prepared keeping in view the specific problems of the area, specific targets groups in terms of families which are clearly identified and the schemes directly benefitting the individual tribals

should receive the highest priority in the planning process.

Broadly speaking, all the developmental progra-mmes fall in three categories for the purposes of quanti-fication of outlays for tribal areas. They are as
follows -

- 1) Individual beneficiary oriented programme accord-ing to the population criterian;
- 2) Infrastructural development programmes on the basis of relative size of geographical area of the region and,
- 3) Some programmes with reference to the level of deficiency compared to the accepted norm determining the level of investment.
- 11.6 The I.T.D.P. project plan, in order to be viable area development plan with the focus on the development of tribal communities has been outlined with appropriate broad sectoral programmes. The schemes included in the I.T.D.P. plan are a mixture of beneficiary oriented, infrastructural and human resource development programmes. Taking into consideration the above points the level of investment outlay has been indicated for the VIIIth Five Year Plan (1990-95) period.
- 11.7 The Integrated Tribal Development Project Plan has defined the main thrust area/sectors like agricultural and allied services, minor irrigation, social and community services wherein full employment economy, education and health services find priorities. If the financial

requirements as emerged with reference to the central problems of the I.T.D.P. are provided in the first instance, the all round development of the area will be reached to the desired level at a faster rate. In short, if the outlays proposed are made available in sufficient quantum for the programmes envisaged, the development of the project area and the people will be achieved at a accelerated pace in the positive manner.
