

The analysed the data will be submitted in due course of time.

III. Health Status

All the 24 Jaruwa are found to be healthy, among the ~~24~~ 12 females one women was pregnant, One women has lost one eye. Both men and women including the children above 5 years of age were having small wounds and scratches in their body. This may be due to food gathering and hunting in the deep jungle. The Jaruwa shown positive response for medicine. All the Jaruwa who were suffering with wounds were applied the medicine.

IV. Food

It is observed that the Jaruwa used to take sea food, roots, tubers, fruits and wild animals. When enquiring with some of the male Jaruwa I understand that they consume all types of snails, fishes, when the question of consuming all types snails was accepted
