As directed the finding of the medical team in respect of Dugong Creek are reproduced below for kind perusal please.

- Mr. Tai, Captain, Aroti, W/A and Ramesh told that ration article was issued 1 month back. On inspection in Ramesh's Kitchen it was found that dhal, sugar, cooking oil was exhausted. Only 10 Kg rice and 5 Kg atta was left with them. His wife was cooking only rice and "surva" made from coconut milk. She said she want dhal.
- It was learnt that the ration articles are being distributed once in a month and not weekly as per recommendations of specialist survey team in 2011. Ration is distributed by once person and not by the multi members committee, it is suggested that distribution may be done by multi member committee.
- Quality of supply of ration is not distributed as per the daily required allowance recommended by the specialist team, in-spite of repeated suggestion, which may be the reason for prevalence of malnutrition and underweight among children recommendations needs to be followed strictly.
