No.

Maximum medicines were old stock and already used and damaged. Bad smell could be felt from the medicines which were provided to these Jarawas more than 2 month ago at Lakra Lungta an Dhani Nallah. He asked the Jarawa about the usage of the medicines NTZ, he replied that this medicine is used for fever and to be provided twice a day, whereas the medicine is for diarrhoea. Another Jarawa was asked about use of Wikorly, he replied it was to be consumed for wound and cut but the medicine is only for anti fever (paediatric). On 24<sup>th</sup> August 2012, one Jarawa Shri. Mamul reached Bamboo Tikery and informed that his three year old child was suffering from fever and vomiting. The child had to be brought to PHC Kadamtala for treatment. On inquiry, the Jarawa informed that child was given over dose of syrup as directed by the Pharmacist and the condition of child become worse.

In conclusion he added that the Pharmacist is very careless and negligent about her responsibility. If this continues, the life of Jarawa is at stake. She was requested, informed and even warned many times not to handover medicines to the Jarawas for stocking, but she should visit the camp daily and administer the drugs as per the health condition and age of the patient.

He therefore humbly requests to kindly to transfer her from Kadamtala and post on some other PTG area. We can manage without her services at Kadamtala. The services of Pharmacist available at PHC Kadamtala may be utilized for this purpose. All our Janjati Sevaks have been trained by the Directorate of Health Services and ICMR and WHO for first aid and IMNCI"

Considering the facts expressed by the T.W.O, AAJVS and the alarming situation created by the Pharmacist, it is proposed that we may call for an explanation from the Pharmacist for further necessary action

Director (T.W.O) has also desired to call explanation  
PHC up D.A.
