Mankind needs more forest land to absorb high carbondioxide content in the present situation where pollution levels are at peak. The threatened animal kingdom cannot co-exist in the present circumstances of abatement in forest land. Alarminglly in Andhra Pradesh alone an extent of 14,56,542 acres of forest land was distributed. Besides there is 4,79,562 acres of land pending in the Forest Department of Andhra Pradesh to distribute which can be viewed as a threat further, as per the information obtained under the Right to Information Act. R.C.No.2337/2013/TRI/RoFR Dated:13-12-2013 Dept. of Tribal Affairs, Govt. of A.P.

Sir, the government did not conduct any survey or research study to identify the number of beneficiaries likely to benefit individuals or communities prior to enactment of RoFR Act 2006.

Is the government committed to distribute forest land under RoFR Act 2006 perpetually until there is no forest land to distribute?

States of Gujarat and Rajasthan where desert covers vast area of land, forests which give hope of rains and fresh oxygen is not untouched, under the RoFR Act these desert states also distributed forest land to the individuals and communities.

The Governments cannot boast of its accomplishment at the cost of ordinary citizen lives at stake and endanger wild animals. Sir, I am afraid to forecast perishable wildlife and humanity under the continuing circumstances.
